In the coming weeks the Cotton Quality Reports will transition to being released from a new system—the Market Analysis and Reporting Service (MARS). The reports generated from MARS will include the percent that the predominate color and leaf grades represent, the average loan difference, the percent tenderable and the number of gins that submitted samples. Once MARS begins issuing reports, they will be generated from both systems for four (4) weeks to allow users to transition to the new formats.

* Data withheld. Classing office classed less than 500 bales.

Data withheld to avoid disclosure of information from one gin.
