Worksheets on this page deal with unit conversions within the measurement system. The metric system is a great place to start learning how to convert between units, as all conversions are based on multiples of ten. I wrote a really great post that introduces all the concepts necessary for conversions within the metric system here ... Overview of the measurement system... and worksheets here will provide all the practices you need to master them! Each metric conversion worksheet deals with conversions within specific measurement classes (for example, length or mass) as well as metric conversions between classes, for example linear dimensions (meters) and surface (square meter), as well as cubic dimensions (meters sliced) to volume (liters). The metric system is a rich playground for developing conversion skills before moving to a slightly confusing conversion of common (British) measurements or conversions between common and metric systems with different conversion constants. No matter what type of conversions you need to figure out, CalculatorSite.com has a thorough set of unit conversion calculators to solve any type of problem in front of you. Metric tables for conversion The Metric System is used worldwide as a standard for measurement. The practice of converting units in this system is key to success in mathematics, science and many other fields of study. Each metric conversion worksheet in this section provides a conversion practice between unit types. for example, length (distance), mass, and volume. Millimeters in meters, and other distance conversions The first set of conversion worksheets deals with converting length units of measure. The base unit of distance in the metric system is the meter. The first set of worksheets focuses on conversions of less than a meter, including millimeters per meter and centimeters per meter. Additional worksheet sets deal with larger metric units, including metres up to kilometres, metres to decametro and meters to hectometers. A complete set of worksheet length conversion practices is also provided that mixes the conversion of units larger and smaller than meters, such as the conversion of centimeters to kilometers. Milligrams to Grams and Other Mass Conversions The second batch of metric conversion worksheets on this page discusses the conversion of bulk units. Gram is the base unit of mass in the metric system. The first set of worksheets focuses on conversions using units that are fractions of a gram, including milligrams up to grams and centipedes on grams. More conversion of worksheets are then engaged in conversion into units larger than grams, including grams in kilograms, grams to decagrams and less often, but also interesting grams of hectograms. The complete set of bulk conversion worksheets includes the conversion of units larger and smaller than grams, for example Per kilogram. Milliliters to liters and other volume conversions The final batch of metric conversion worksheets on this page is about converting units of metric volume. A liter is the basic unit of mass in the metric system, consisting of exactly 1000 milliliters. The first of the volume conversion worksheets deals with units that are less than a liter of milliliters to liters and centiliters per liter. The practice continues to convert worksheets and then deal with conversion into units larger than a litre, including litres into kiloliters, litres to decalitres and finally litres of hectolitres. The series ends with conversion worksheets covering the conversion of units larger and smaller than a liter, and one such typical conversion is milliliter to kiloliters. 6th, 7th, 8th, 9th, 10th, 11th, 12th, Higher Education, Adult Education, HomeschoolPage 28th, 9th, 10th, 11th, 12th, Higher Education, Adult Education, HomeschoolPage 36th, 7th, 8th, 9th, 10th, 11th, 12th, Higher Education, HomeschoolPage 42 worksheets+answer keys. Conditional sentences focus on si clauses with le présent, le futur simple, l'imparfait, le conditionnel, le plus-que-parfait & le passé du conditionnel. Verbs included are: prendre, avoir, voir, comprendre, vouloir, appeler, être, partager, savoir, neiger, aller.
