Description of Positive Environmental Product / Service Impact

How would you describe the positive outcome for the environment created by your product/service?

Les projets portés et accompagnés par Aire Nouvelle génèrent un impact environnemental positif en transformant en profondeur la manière de concevoir, développer et exploiter les opérations immobilières. Cet impact se traduit à plusieurs niveaux : Réduction significative de l'empreinte carbone du secteur du bâtiment Aire Nouvelle développe des projets visant à réduire fortement les émissions de gaz à effet de serre, en agissant à la fois sur : la sobriété énergétique des bâtiments (conception bioclimatique, performance énergétique élevée), le recours à des énergies décarbonées, la réduction du carbone des matériaux (ACV, matériaux bas carbone, réemploi, biosourcé). Cette approche permet d'inscrire les projets dans une trajectoire compatible avec les enjeux climatiques (RE2020, neutralité carbone, standards internationaux type Architecture 2030). Développement de bâtiments et quartiers bas carbone sur l'ensemble du cycle de vie Les opérations intègrent une vision cycle de vie complet : conception responsable (implantation, compacité, mutualisation), limitation des impacts chantier, optimisation de l'exploitation, anticipation de la réversibilité et de la fin de vie. Aire Nouvelle favorise ainsi des projets compatibles avec des référentiels exigeants (BREEAM, BBKA, HQE, etc.) et avec les objectifs de transition écologique du secteur immobilier. Sobriété des ressources et économie circulaire Les projets contribuent à : limiter la consommation de ressources naturelles, favoriser le réemploi et la valorisation des matériaux, intégrer des stratégies d'économie circulaire à l'échelle bâtiminaire et urbaine. Cette logique permet de réduire l'impact environnemental au-delà de la seule énergie, notamment sur les ressources et les déchets. Contribution à des territoires plus durables et résilients Aire Nouvelle intervient sur des projets urbains structurants, intégrant : la densification raisonnée et la limitation de l'étalement urbain, la proximité des transports et des services, des solutions favorisant les mobilités douces et bas carbone, l'intégration de biodiversité et de nature en ville. Accélération de l'innovation environnementale dans le secteur immobilier Au-delà des projets livrés, Aire Nouvelle agit comme un catalyseur de transformation du secteur en : structurant des montages innovants intégrant des objectifs environnementaux ambitieux, mobilisant l'ensemble des parties prenantes (investisseurs, collectivités, exploitants), intégrant des solutions techniques et programmatiques à fort impact environnemental. Ainsi, les services d'Aire Nouvelle contribuent directement à la réduction des impacts environnementaux du secteur immobilier tout en diffusant des pratiques durables à l'échelle des projets et des territoires, générant un bénéfice environnemental mesurable et systémique.

- The impact is created by a revenue-generating product/service line (e.g. selling non-toxic cleaning products, sustainability consultancy)
- The impact is created by the company's daily operations (e.g. using non-toxic cleaning products in the company's headquarters) and not the core product/service

- Conserves or diverts resources (including energy, water, materials, etc.)
- Conserves or preserves the well-being of land and/or animals (e.g. land protection or reforestation services, sustainably harvested agricultural products)

Resource Conservation Overview

Tell us more about how your product or service reduces energy, GHG emissions, water and/or waste.

Dans le cadre des opérations immobilières, nous agissons dès la phase de conception afin de limiter les impacts liés à l'énergie, à l'eau et aux déchets. Sur le volet énergétique, la démarche consiste d'abord à réduire les besoins à la source grâce à une conception bioclimatique. Celle-ci repose notamment sur l'orientation du bâti, la compacité des volumes, la maîtrise des surfaces vitrées ou encore le recours à la ventilation naturelle, afin de diminuer les besoins en chauffage, en refroidissement et en éclairage. En complément, une attention particulière est portée au choix d'équipements performants et pilotables, permettant de suivre et d'optimiser les consommations en phase d'exploitation. Cette logique est renforcée par le recours prioritaire aux énergies renouvelables ou de récupération, en privilégiant notamment le raccordement à des réseaux urbains vertueux, la récupération de chaleurs existantes ou encore la production locale d'énergie (par exemple via le solaire ou d'autres solutions adaptées au site). Concernant l'eau, les projets intègrent des dispositifs de gestion à la parcelle visant à limiter les prélèvements et à favoriser les cycles naturels. Les eaux pluviales sont ainsi collectées, stockées puis infiltrées grâce à des aménagements paysagers spécifiques, ce qui permet de réduire le recours aux réseaux classiques et de contribuer à la recharge des nappes. Dans certains cas, ces dispositifs permettent également de remplacer l'usage d'eau potable, notamment pour l'arrosage, tout en améliorant la qualité des milieux.

Toxin / Pollution Reduction Overview

Tell us more about how your product or service reduces use of toxic or hazardous substances, prevents pollution or remediates discharges to air, land or water

Gestion des toxines et prévention de la pollution sur nos chantiers La maîtrise des impacts environnementaux liés aux toxines et aux polluants constitue un axe prioritaire de notre démarche. À ce titre, nous mettons en œuvre une stratégie globale articulée autour de trois objectifs : éviter, réduire et compenser/traiter les pollutions dans l'air, l'eau et les sols. Éviter l'usage de substances toxiques En amont des projets, nous encadrons strictement le choix des matériaux et procédés via nos cahiers de prescriptions techniques (CPT) dédiés à la biodiversité, aux matériaux, à l'énergie et à la mobilité. Ces référentiels imposent : La sélection de matériaux à faibles émissions (COV, formaldéhydes, substances dangereuses) L'exclusion ou la substitution progressive des produits identifiés comme nocifs pour la santé ou l'environnement La traçabilité et transparence des matériaux utilisés (FDES, labels, certifications) Réduire les impacts en phase chantier Pendant les travaux, nous déployons des mesures opérationnelles visant à limiter les rejets et les nuisances : Gestion rigoureuse des déchets : tri à la source, valorisation, filières spécialisées pour déchets dangereux Prévention des pollutions accidentelles : stockage sécurisé des produits, bacs de rétention, plans d'intervention Réduction des émissions dans l'air : limitation des poussières (arrosage, bâchage, techniques adaptées) choix d'engins et modes opératoires moins émissifs Protection de l'eau et des sols : dispositifs anti-pollution (filtres, décanteurs) interdiction de rejets directs gestion des eaux de chantier Organisation de la mobilité chantier afin de réduire les émissions de GES et polluants (logistique optimisée, mobilités alternatives) Dépolluer et restaurer les sites Lorsque les sites présentent des pollutions existantes, nous mettons en œuvre des actions de dépollution et de renaturation ambitieuses. À titre d'exemple, sur le projet Astella au Mans, nous conduisons une dépollution globale du site visant à : Traiter les sols contaminés Éliminer les sources de pollution historiques Restaurer la qualité environnementale du terrain Permettre un réusage sécurisé et durable du foncier, compatible avec de nouveaux usages urbains Cette approche s'inscrit dans une logique d'économie circulaire du foncier, limitant l'artificialisation des sols et contribuant à la réhabilitation de friches. Amélioration continue et engagement Enfin, nos pratiques s'inscrivent dans une démarche d'amélioration continue : Mise à jour régulière des CPT Sensibilisation des équipes et partenaires Suivi des indicateurs environnementaux chantier Intégration des retours d'expérience
