Working software to *showcase your innovation* in 4 weeks

## Art of the Possible (AOP)

This program helps innovators and product leaders demonstrate the power and impact of their idea. In only four weeks, we build of a demo solution which is backed by a real custom software implementation.

Deploying new products and building custom software is risky. The Art of the Possible confirms when and how your future investment will pay off.

- Validate a new business line or product idea
- Build a demo for investors, leaders, or new clients
- Evaluate risky technology or operational changes

Our elite-level engineering practices include:

Small, Empowered, Cross-Disciplinary Team

Human-Centered Participatory Design

Iterative and Incremental Product Development

Caravel Labs is technology consultancy for social impact. Our team of global tech talent is passionate about delivering business outcomes through software. We use rigorous, proven-effective software engineering principles, practices, and tools to rapidly implement software for social innovators.

Timeline

- Week 1
  Design-thinking workshop
  DevSecOps foundations

- Weeks 2 & 3
  Solution prototyping
  Software development
  Usability testing
  Weekly product demos

- Week 4
  Final deployment and code handover to your team

Outcome

- Working software for a 10 to 15-minute demo of your most compelling ideas

- A proven, reliable software platform and toolchain you can continue to build upon

- A prioritized backlog of features and a roadmap to launch your product in 3-months or less
