CATALOGUE

JOHANNES ANDERSSON – PHOTOGRAPHER

Brand History

with some cool facts :)

* Original sketch of the Duo made by Alberto González with José Allard, the founders of ClickEat.

Chile is a really looong country!

To the north you can find the desert and to the south, antarctic cold.

It is important to tell our story, where we come from and where we want to go.

We were **born in Chile**, a country with an extraordinary nature, thanks to it's diversity of climates and territories. This benefits us in several aspects, especially agriculture.

ClickEat merged the use of the Birch veneer and the creation of a hygienic and practical product for food.

We realized that it was not necessary to use single-use plastic and that it could be replaced by a Duo (wooden cutlery joined by a pre-cut), so our dream to contribute to reforestation became a greater purpose, **reforest and reduce the use of plastic on the planet.**

FUN FACT!

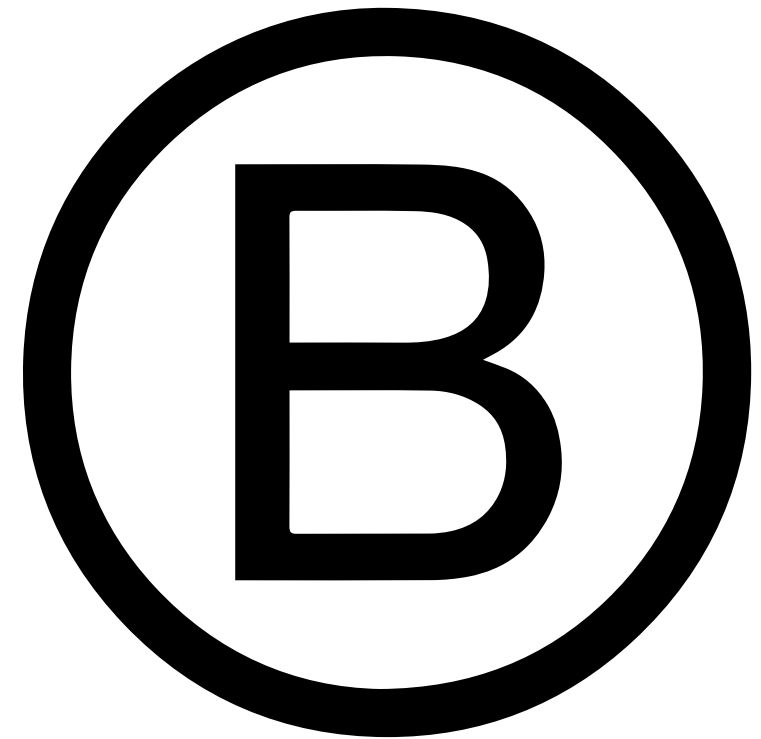

it started designed on a napkin iwow!

**FSC
certificate**

*highest social
and environmental
standards*

Certified

®

Corporation

- Certifying as a B Corporation goes beyond product- or service level certification.
- B Corp Certification is the only certification that measures a company's entire social and environmental performance.
- The B Impact Assessment evaluates how your company's operations and business model impact your workers, community, environment, and customers.

**In ClickEat, we
replace single-use
plastic products
with sustainable
alternatives, through
protected design
and innovation.**

What's the difference between backyard and industrial compostability?

BACKYARD COMPOSTING

Nature doing nature's job.

Can be composted in every-day settings, like your own backyard, producing nutrient rich soil.

Even if it end up in a landfill it will decompose faster than other products.

INDUSTRIAL COMPOSTING

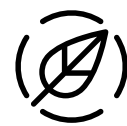

It requires industrial intervention, high temperatures need to be applied to the material.

Faster biodegradation of organic material, but it can only be composted in certain settings.

Produces high quality toxic-free compost, due to the controlled conditions of the process

LEGEND- ICONOGRAPHY

Backyard compostable.

PLA biopolymer recyclable
and industrially compostable.

Can be customized.

-4°F to 113°F.

32°F to 248°F.
Microwave and oven safe.

Plant-based inks.

No glue.

CERTIFICATIONS

We are supported by the brand “Foods From Chile, Source of Life”, an image that allows agricultural entrepreneurs to have a common seal, which reflects the imprint and quality of Chile’s agri-food industry in international markets.¶ Having the authorization for the use of the Chile trademark allows us to increase our reputation, credibility and competitiveness. Associating our brand Simplo with that of Chile strengthens our value proposal in the foreign markets.

We certify your biodegradable products in accordance with DIN EN 13432 and, if applicable, other national and international standards, and award the two internationally recognized certification marks: our “DIN-Geprüft industrially compostable” test mark and the “Keimling” compostability mark of European Bioplastics e. V. Both marks can be used individually, alternatively or simultaneously, and document the degradability of your products.

Plastics and packaging with our NF T51-800 certification guarantee consumers complete compostability in their own backyards.

Being FSC certified demonstrates that you meet the highest social and environmental standards in the market. Public concern about the state of the world’s forests and timber resources is growing and FSC gives you a reliable solution to complex environmental and social issues.

This implementation and certification gives confidence to its customers of the correct compliance with the legal requirements of the Food Sanitary Regulation, which establishes the obligation to establish Good Manufacturing Practices, as well as implementing the Hazard Analysis and Critical Control Point methodologies throughout its production line.

ISEGA

ISEGA is an independent testing and certification institute that performs tests to confirm the compliance of materials and chemicals used for food packaging production.

New consumer products for people must be FDA approved before they are marketed in interstate commerce. This means that a company must demonstrate that its drug or biological product is safe and effective for the intended use, and that it can manufacture the product to federal quality standards.

DUO

Wooden knife and fork cutlery

6.9 × 1.6 in
1 set (fork + knife)
Material: Wood

The fork ready to
pierce and the knife
ready to cut.

Easy to split,
easy to use.

ClickEat is strong
but also lightweight

CERTIFICATIONS

Backyard Compostable.

Can be customized.

-4°F to 113°F.

32°F to 248°F.
Microwave and oven safe.

STRONG

Patented single piece construction allows the fork to pierce a raw carrot, the knife to cut anything from a steak to a tomato.

LIGHTWEIGHT

Weighing about 3/4 the weight of comparable plastic, ClickEat is strong but also lightweight, making it easier on the hand and less expensive to ship.

HYGENIC

Since the product has to be opened for use, the consumer has peace of mind that it has not been used or tampered with before. It can also come in a paper sachet, aiding the concept of non-manipulation.

★★★★★ Loved them

Calificado en Estados Unidos el 4 de diciembre de 2019

Compra verificada | Early Reviewer Rewards (¿Qué es esto?)

I bought these for a friends-giving and they worked perfectly.

Everyone loved them. I was surprised how easy they were to use.

Backyard Compostable.

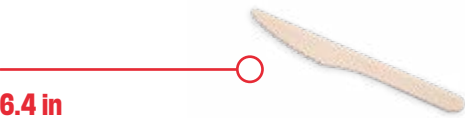

-4°F to 113°F.

32°F to 248°F.
Microwave and oven safe.

No glue.

ALL NATURAL

Wild straws are extracted from rye fields. They are 100% cereal stalk so they are **compostable** and **chemical free**. At the end of their use they can be returned to the ground, avoiding contamination.

STRONG

They stay strong in hot and cold liquids, their different sizes are suitable for a variety of uses, from stir your coffee to drink a milkshake.

COMMUNITY

Our straws are extracted in Lolol, a small town in Chile. We work together and support the community.

ECONOMIC

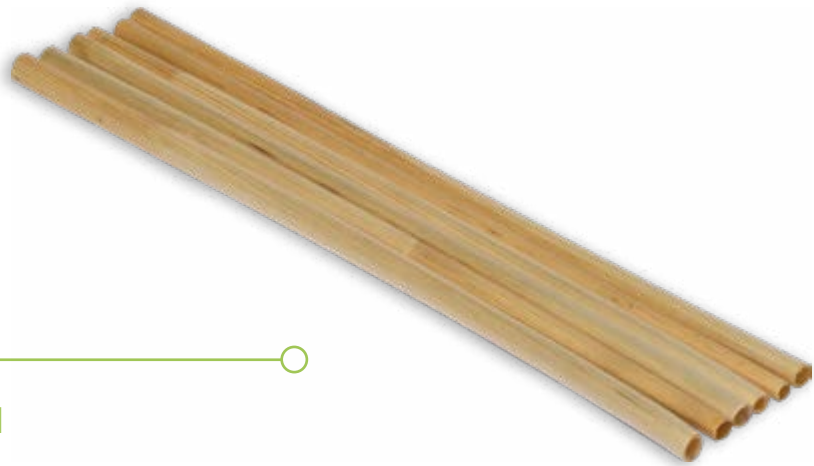

The Wild Straws are a memorable and an economically viable alternative to plastic, paper and bioplastic straws and is truly "Backyard compostable". It came from the Earth, it becomes Earth...

HYGIENIC

We have the HACCP Certificate, which approves the hygiene in the production and distribution processes.
