

Danone Ukraine Marketing of Breastmilk Substitutes Disclosure

In 2022, B Lab Global released its [Risk Standards for the Marketing of Breastmilk Substitutes](#), which initially used the Access to Nutrition Initiative (ATNI) [BMS/ CF Index 2021](#) to evaluate the eligibility of certain companies. B Lab Global recognizes that the ATNI Index has since significantly evolved and is working on updating its standards accordingly. Companies currently on the B Corp certification journey will have to abide by the revised B Lab standards, once available, during their next recertification.

Introduction to Danone Ukraine

Danone Ukraine [Nutricia Ukraine, Kremenchug Dairy Plant, Danone Dnipro LLC, LLC Danone (hereinafter "Danone Ukraine")] is a subsidiary of Danone S.A., a global food and beverage company with the mission of bringing health through food to as many people as possible. Danone Ukraine sells early-life nutrition products that are considered breastmilk substitutes (BMS) according to the World Health Organization (WHO). These products include Nutrilon, Milupa of Covered Products with operations and sales in Ukraine. Ukraine belongs to Zone Europe, where Specialized Nutrition represented 33% of 2023 revenues. In that context, BMS represent less than one-third (11.2%) of Danone Ukraine's revenues.

Company Comments:

Danone Global Policy for the Marketing of Breastmilk Substitutes ("Danone's policy") defines breastmilk substitutes (Covered Products) in a different/narrower way than the broad definition mentioned in the WHO implementation manual 2017¹. See Definition/Scope of Products Included in WHO Code and Danone's Policy in pages [3 to 5] of this memo.

1. B Lab Standards Advisory Council criteria for companies involved in the Marketing of Breastmilk Substitutes and Complementary Foods

As a subsidiary of Danone S.A., Danone Ukraine must abide by [Danone's Global Policy for the Marketing of Breastmilk Substitutes](#). As determined by B Lab's independent Standards Advisory Council, companies involved in the marketing of breastmilk substitutes are eligible for B Corp Certification if they meet specific requirements for the industry, including disclosure of their practices. These requirements vary by type of company, including whether the company's practices related to marketing breastmilk substitutes are assessed in the Access to Nutrition Index.

¹ [Guidance on Ending the Inappropriate Promotion of Foods for Infants and Young Children](#) (2017).

B Lab Global's current Risk Standards for the Marketing of Breastmilk Substitutes (2022) uses the Access To Nutrition Initiative (ATNI) Global BMS/CF Marketing Index 2021 to assess certain companies' eligibility. While B Lab Global acknowledges that the ATNI Index has significantly evolved, we will continue to utilize the 2021 version for companies during our certification and recertification processes until the evolution of B Corp Certification standards (EoS) is implemented. As part of EoS, B Lab Global is evaluating its risk review process and approach to controversial issues.

Therefore, subsidiaries of ATNI-listed companies are eligible to certify if:

- The parent company meets the eligibility requirements established based on the performance of the Access to Nutrition Index 2021 (a minimum score of 55% to be eligible for certification, and 75% by 2030), the subsidiary has applied the parent company's policy and adheres to national law when those laws are more stringent than the parent company's policy, or
- The parent company remains in the top 20% of companies on the index (only in cases when a company falls below the 55% score threshold due to changes to the ATNI scoring methodology or countries selected for BMS/CF 2 assessment),
- The parent company does not meet the eligibility requirements above, but the subsidiary meets the immediate expectations of the BMS Call to Action at the time of certification and achieves full Code compliance by 2030.

All manufacturers of BMS/CF are required to support legislation fully aligned with the Code as well as disclose their policies on lobbying, specific lobbying practices as they relate to BMS/CF, and areas of non-compliance with the Responsible Lobbying Framework (RLF) disclose how the company manages compliance to the Code, and (3) be transparent about potential areas of non-alignment.

As a subsidiary of Danone S.A., Danone Ukraine is eligible to be assessed against the above B Lab Standards Advisory Council criteria for companies involved in the marketing of Breastmilk Substitutes and Complementary Foods. For more information on B Lab's position on the marketing of breastmilk substitutes, please refer to B Lab's statement on the breast milk substitute industry and B Corp Certification [here](#).

Danone Ukraine and B Corp Certification Eligibility

Danone S.A.'s alignment with the WHO Code and subsequent WHA Resolutions has been externally assessed by the [Access to Nutrition Index, receiving an overall score of 68%, ranking number one in the ATNI – BMS/CF Index 2021](#). Danone Ukraine applies Danone S.A.'s policy and adheres to all national laws when those laws are more stringent than its policy. Therefore, Danone Ukraine is eligible for B Corp Certification.

While Danone Ukraine has not been separately assessed by the Access to Nutrition Index, Danone's global policies on the marketing of breastmilk substitutes apply to Danone Ukraine. Each subsidiary of Danone S.A. adheres to the following compliance standards:

- The Danone BMS Policy is shared with employees involved in marketing BMS as part of their recruitment and onboarding process and a BMS declaration statement is signed by each employee at the time of joining Danone Ukraine. Induction training on the Danone BMS Policy is organized for new employees within 3 months of joining,
- Employees responsible for the marketing, distribution, selling, education, and/or governance of BMS Marketing must undertake in-depth training (such as e-learning) on the Danone BMS Policy. Additionally, employees of the above-mentioned teams receive refresher trainings on the Danone BMS Policy on a yearly basis,
- Furthermore, the Danone BMS Policy is incorporated into contracts with relevant Partners of Danone, employees of these partners have access to training materials shared by Danone and are trained,
- A reference to the Danone BMS Policy is also made in our communication to our commercial third parties,
- Danone internal audits include control points on the Danone BMS Policy and specific external audits are conducted by independent companies on a yearly basis based on a global roadmap. In addition, a yearly self-assessment is conducted on the implementation of the Danone BMS Policy in the local market,
- BMS-related communication materials follow an approval flow via the Danone communication validation management system,
- Allegations of non-compliance with the Danone BMS Policy are monitored and reported by affiliates of Danone S.A. to the Specialized Nutrition General Counsel team on a quarterly basis for consolidation, corrective, and/or disciplinary actions as needed.

Company Comments:

Danone supports the WHO's global public health recommendation calling for exclusive breastfeeding for the first six months of age and continued breastfeeding up to two years and beyond, combined with the safe introduction of appropriate complementary foods.²

² [WHA34.22](#) (1981) on "International Code of Marketing of Breast-milk Substitutes"; [WHA35.26](#) (1982) on "International Code of Marketing of Breast-milk Substitutes"; [WHA27.43](#) (1974) on "Infant nutrition and breast feeding"; [WHA31.47](#) (1978) on "The role of the health sector in the development of national and international food and nutrition policies and plans, with special reference to combating malnutrition"; [WHA33.32](#) (1980) on "Infant and young child feeding"; [WHA37.30](#) (1984) on "Infant and young child nutrition"

Danone is committed to delivering high-quality, safe nutrition³ in all markets we operate in: Formula is amongst the most strictly regulated foodstuffs. All our products are manufactured under very strict hygienic and quality management procedures to help ensure the protection, health, and safety of infants and young children.

Danone also supports the overarching nutrition and health ambition of WHO, including the global nutrition targets for 2025 and the Sustainable Development Goals guiding the international development agenda until 2030.

2. Areas of Non-Alignment with the WHO Code

In addition to the commitment to the WHO Code, a number of Danone's policies align entirely with the provisions of the WHO Code. Danone Ukraine has identified and acknowledges the following areas where Danone's policies may not align with the WHO Code, or where there may be differing interpretations of how the WHO Code and WHA Resolutions should apply:

Definition/Scope of Products Included in WHO Code and Danone's Policy

Danone's policy regarding the marketing of breastmilk substitutes applies to a scope of products that differ from the complete scope of the WHO Code.

Article 2 of the WHO Code states "The Code applies to the marketing, and practices related thereto, of the following products: breast-milk substitutes, including infant formula; other milk products, foods, and beverages, including bottle fed complementary foods, when marketed or otherwise represented to be suitable, with or without modification, for use as a partial or total replacement of breast milk; feeding bottles and teats. It also applies to their quality and availability, and to information concerning their use." Breastmilk substitutes are defined as "Any food being marketed or otherwise presented as a partial or total replacement for breast milk, whether or not suitable for that purpose."

Danone Policy applies to "Covered Products," which include "Infant Formula (formulated to meet the normal nutritional requirements of infants up to the age of six months) and information concerning its use, any other food or beverage that is presented to be a partial or total replacement for breastmilk, for infants up to six months of age, whether or not suitable for that purpose, and information concerning their use [and], delivery products (such as bottles and teats) and information concerning their use." For countries defined as High-Risk Countries in Danone Policy, Covered Products are extended to include: (i) Follow-On Formula (intended for infants from six to twelve months of age) and information concerning its use, (ii) Complementary (weaning) foods and drinks for the use by infants under six months of age, and (iii) Any other

³ [WHA34.23](#) (1981) on "Nutritional value and safety of products specifically intended for infant and young child feeding"

any other food or beverage that is presented to be a partial or total replacement for breastmilk for infants and children.

Higher Risk Countries are listed in Appendix 1 to the Danone BMS Policy and are defined as those countries that meet either of the following criteria: (i) More than 10 per 1000 (under 5 years of age) mortality rate; (ii) More than 2% acute malnutrition (moderate and severe wasting) in children under the age of 5 years. The WHO Code does not make a distinction between different countries.

In Danone's policy, "Excluded Products are all products, other than Covered Products, produced or sold by Danone, including modified milks for children and products intended for use by infants with special medical conditions.

In addition, as per ATNI assessment, in Danone's policy, products that are not defined as Covered Products, but that are produced or sold by Danone, include:

- (1) Follow on formula in low risk countries.
- (2) Growing up milks for 12 - 36 months,
- (3) Complementary food and drinks for infants, when labelled for 6 - 36 months or such a lower age as may be mandatorily required by local legislation, provided they do not contain instructions for modification for use as a BMS,
- (4) iFSMPs or their equivalent in a country (other than the product range mentioned under (ii) above), that are designed for infants with medical conditions who are unable to absorb, digest or metabolise breast milk or standard infant formula as a sole source of nutrition, are under medical supervision and are at risk of death or compromised growth and developmental potential without access to these products, and
- (5) Milk products not adapted for infant feeding.

Company Comments:

Based on Danone Policy from 2016 onwards, Danone does not advertise or promote infant formula for children aged 0-6 months, anywhere in the world, even if permitted by local laws – and was the first company to take such a commitment.

Danone's approach is to implement strict global standards for marketing of BMS around the world, with tighter requirements in countries where there is greater risk to infant health. Under the Danone Policy, several countries are therefore defined as "higher risk" [\(following the FTSE4Good criteria\)](#) and all other countries are considered as "low risk".

- Ukraine, where Danone Ukraine sells breast milk substitutes, is considered as a Higher Risk Country in Danone policy and therefore the definition of Covered Products include Infant Formula (0-6 months) as well as Follow-On Formula (6-12 months) and information concerning its use and complementary (weaning) foods and drinks for the use by infants under 6 months of age.

Products for infants with special medical conditions are a unique category. They are used under medical supervision, making sure that the infant and/or child is receiving the appropriate nutritional support to ensure optimal growth and development, either in an acute clinical situation or for chronic conditions. Without the support of these products, infants may have their nutritional status compromised, making them more prone to related complications. In Europe, this category is subject to specific legislation, (EU) No 609/2013.⁴

WHA Resolutions Subsequent to the WHO Code:

Since the adoption of the WHO Code, a number of World Health Assembly resolutions have either added to, revised, or clarified the content of the original WHO Code. A list of resolutions that may be deemed relevant to individual company practices, but that have not been incorporated into Danone's own policy at this time, including [WHA 39.28](#) (1986), [WHA 45.34](#) (1992), [WHA58.32](#) (2005) and [WHA69.9](#) (2016)

Company Comments:

Danone strongly believes that formulas for young children are not intended to replace breast milk. They can be used in conjunction with continued breastfeeding similarly to other complementary foods. This interpretation does not align with the WHO Guidance issued in 2017 and prepared by a series of WHA resolutions⁵.

Danone is also dedicated to continuous product improvement leading to a better nutritional status of the infants and young children, and we believe that BMS manufacturers have an essential role to play in supporting educational scientific advancement for mothers and young children nutrition. This includes educational events to inform the healthcare system and discuss scientific and factual information about our products and services.

In some cases, and following unsolicited requests, we support healthcare organizations with free/subsidized supplies⁶. This is not aligned with the strict interpretation of WHA 39.28 (1986) and WHA 45.34 (1992).

⁴ See background at: <https://www.efsa.europa.eu/en/press/news/151126>

⁵ [WHA69.9](#) (2016) and the [Guidance on Ending the Inappropriate Promotion of Foods for Infants and Young Children](#) (2017).

⁶ Through a transparent established procurement process upon unsolicited requests, which sometimes include requests for provision of low cost supplies, for babies who must be fed with infant formula during their stay at healthcare organizations, following medical advice

Finally, Danone strives for meaningful and educational information on product labels. We do not apply the labelling provisions outlined in WHA resolution WHA58.32 (2005) ⁷ which requires a statement that infant formula may contain pathogenic microorganisms as we believe this may result in scaring mothers.

3. Management Practices of the Company

In accordance with Danone's Policy on the marketing of breastmilk substitutes, Danone Ukraine has the following management practices in place to manage compliance:

Danone ensures that a third party (Bureau Veritas) is engaged to undertake an external verification of compliance with the Danone Policy in no less than three business units every year. Danone publishes the summary reports of such external verifications every year on Danone.com. Yearly a report of all substantiated allegations of non-compliance with the Danone Policy is compiled by Danone and published on Danone.com, which summarizes the allegations made and the actions taken for each substantiated allegation.

In addition, as part of the established internal audit protocol of Danone, internal verifications are conducted on business units operating within the scope of the Danone Policy. Each business unit is also responsible for an annual self-assessment of its compliance with the Danone Policy and adequate remediation plan to address improvement areas.

On a yearly basis, an internal summary report is prepared on all matters related to management and compliance with the Danone Policy and is presented to the Specialized Nutrition division and executive vice president and, ultimately, to Danone S.A.

4. Lobbying:

Danone discloses its approach to lobbying and advocacy in its global [Advocacy Policy](#). Within the policy, they address the topic of breastmilk substitutes by stating:

"We are thus committed to fostering a proactive, constructive and evidence-based dialogue supporting breastfeeding around the world – not undermining public policy frameworks that serve this purpose – while endorsing the principles of openness, transparency and integrity in our advocacy activities. Danone is indeed decided to support the design and implementation of advocacy initiatives in every country where it operates that will contribute to creating an environment where all parents feel informed and supported on all questions of infant nutrition."

⁷ [WHA58.32 \(2005\)](#) on "Infant and young child nutrition"

Danone engaged with Carnstone, an independent management consultancy that developed the [Responsible Lobbying Framework](#), and their policies and practices were assessed independently against the framework by ATNI in May 2021, based on the 2017 version of the Danone Advocacy Policy (Danone has since successively updated its Advocacy in December 2019, in July 2020 and most recently in December 2023). At the time of the assessment in 2021, the final outcomes of the report showed that Danone reached a score of 58%, ranking in the second position of the breast milk substitutes manufacturers. Danone scored zero points in several areas within the framework on topics concerning Crowding out, Political donations, Alignment of lobbying principles and practices, Narrative on lobbying practices, Examples of implementing commitments in respect of lobbying in the public interest, Examples of implementing commitments on the approach to lobbying, Auditing, and External stakeholder involvement. Several of those points have since been addressed in subsequent updates of the Danone Advocacy Policy.

Company Comments:

Although Danone is permitted to engage in lobbying activity, including on policies related to infant formula, our company does not lobby on policies that disparage the use of breastmilk, or on policies that promote the use of BMS over breastmilk. Rather, and as recalled in Danone's answer to the BMS Call to Action, we offer to work together with the UN, WHO, governments, civil society organizations, and pediatric societies to develop a new evidence-based, shared policy agenda, focused on increasing breastfeeding rates and improving the nutritional health of infants and mothers.

In Danone's 2023 Advocacy Policy, a number of the points made in the 2021 ATNI report were addressed especially with regards to the Legitimacy pillar of the Responsible Lobbying Framework, but also on Political Donations, Auditing, and External stakeholder involvement. In particular, Danone disclosed an exhaustive list of its corporate trade association and business partnerships/memberships, alongside the Board seats held.

Danone Ukraine is fully committed to transparency and believe that people should have access to publicly available information from all organizations that engage with elected officials.

Here is the link to Danone's appendix in the Danone Advocacy policy:

Page 17 of the 2023 Advocacy policy: [Danone Policy on Advocacy \(December 2023\)](#).

Next Steps

As stipulated by the requirements for B Corp Certification, Danone Ukraine will remain eligible for B Corp Certification as long as their parent company, Danone remains above the 55%

threshold and/or the company remains in the top 20% of companies on the 2021 index and works towards the advanced score of 75% by 2030.

Should Danone not maintain any of these requirements, Danone Ukraine would not automatically lose the certification, as long as the parent company Danone has a time bound remediation plan and is able to achieve the 75% threshold in the next instance of the ATNI index. In the case where Danone does not achieve that, Danone Ukraine would be expected to meet the immediate expectations of the BMS Call to Action and achieve full Code compliance by 2030.

B Lab's Public Complaints Process

Any party may submit a complaint about a current B Corp through [B Lab's Public Complaint Process](#). Grounds for complaint include:

1. Intentional misrepresentation of practices, policies, and/or claimed outcomes during the [certification process](#), or
2. Breach of the core values articulated in our [Declaration of Interdependence](#) within the B Corp Community.
