Supercharge your team's software delivery performance

5-Week Software Delivery Bootcamp

Does your team feel comfortable deploying to production multiple times per day without failures?

Our elite-level software engineers and UX experts work hand-in-hand with your design and development team during this 5-week training and mentorship bootcamp.

Your team will learn elite-level patterns and practices for software design, development, and operations. Participants will experience a simulated project to practice techniques which they will subsequently implement in their own day-to-day work environment

Measurably improve software delivery performance in these key areas:

Deployment frequency
How frequently code is deployed to end users

Lead time for changes
Time from code commit to deployment in prod

Time to restore services
Speed to resolution for incidents and outages

Change failure rate
Percentage of code changes resulting in degraded service

Caravel Labs is technology consultancy for social impact. Our team of global tech talent is passionate about delivering business outcomes through software. We use rigorous, proven-effective software engineering principles, practices, and tools to rapidly implement software for social innovators.

Agenda & outcomes

- Week 1: **Training**
  Attendees participate in classroom training and a hands-on project simulation

- Weeks 2-5: **Application**
  Our experts assist your team to implement practices in their day-to-day work by:

  - Mentoring UX research, design, and testing
  - Participating in sprint reviews and demos
  - Supporting effective daily stand-up meetings
  - Encouraging team collaboration
  - Hosting retrospectives
  - Implementing tooling to track and improve software delivery performance
  - Identifying and guiding organizational changes to maximize performance
