

Score Aggregation Methodology & Brand List

Opella.

2025

As the B Corporation Certification is a company-level certification, the assessment of a Parent Company is required to include its subsidiaries in which it owns >50% of the shares and has a controlling interest. Depending on the operations of the certifying company, Parent Companies may roll up their subsidiaries into a single assessment or assess separately.

Regardless of whether a Certified Parent Company's subsidiaries are assessed together or separately, only distinct subsidiaries that B Lab has determined independently meet the performance requirement for certification (i.e. score of 80+) are eligible to use the Certified B Corporation logo and refer to themselves as Certified B Corporations.

Aggregated Scoring Methodology

Opella. and its subsidiaries were required to be assessed in the B Impact Assessment and undergo a review by B Lab staff. The entities were divided into 18 assessments and 7 independent certification clusters, and the overall score was calculated using a weighted average based on HEADCOUNT.

Brands

Brands that are not distinct operating subsidiaries included in the Parent Company's certification are not Certified B Corporations themselves but may use the Certified B Corporation logo if B Lab has determined they have independently met the performance requirement for certification. Otherwise, the Certified B Corporation logo shall only be used in reference to the brand as part of the Parent Company's certification. For a list of brands under each group name that have been determined to have met the performance standards for certification (i.e. score of 80+) independently and can therefore use the B Corp IP, see the following table
