

DISCLOSURE MATERIALS

Certified B Corporations must complete a Disclosure Questionnaire to identify potentially sensitive issues related to the company (e.g. historical fines, sanctions, material litigation, or sensitive industry practices).

This component does not affect the company's score on the B Impact Assessment. If the company answers affirmatively to any items in the Disclosure Questionnaire and B Lab deems them to be material, the company must:

- 1) Be transparent about the disclosure issues identified on the company's public B Impact Report
- 2) Describe how the company has addressed this issue.
- 3) Demonstrate that management systems are in place to avoid similar issues from arising in the future.

In all cases, the Standards Advisory council reserves the right to refuse certification if the company is ultimately deemed not to uphold the spirit of the community.

In addition to the voluntary indication of sensitive issues in the Disclosure Questionnaire, companies pursuing Certification also are subject to background checks by B Lab staff. Background checks include a review of public records, news sources, and search engines for company names, brands, executives/founders, and other relevant topics.

Sensitive issues identified through background checks may or may not be within the scope of questions in the Disclosure Questionnaire, but undergo the same review process and are subject to the same possible review by the Standards Advisory Council, including ineligibility for B Corp Certification, required remediation, or disclosure.

This document contains a copy of the company's completed Disclosure Questionnaire and related disclosure documentation provided by the company.

B Corp Certification - Disclosure Questionnaire Documentation

PROVIDED BY: Reunion Coffee Roasters UPDATED AS OF: 25-Jan-23

DISCLOSURE QUESTIONNAIRE CATEGORY	Environmentally Intensive Industries
TOPIC	Energy and Emissions Intensive Industries
SUMMARY OF ISSUE	As a company, Reunion Coffee Roasters operates in an industry which is energy and emissions intensive. The coffee roasting process at our facility requires the input and burning of natural gas.
	The aspects of the production process that are environmentally intensive is the roasting of coffee .
	The main energy sources used by the company is natural gas .
SIZE/SCOPE OF ISSUE (e.g. \$ financial implication, # of individuals affected)	In the previous fiscal year, 84.18% of the company's revenue was earned from the sale of its finished good products of roasted coffee .
IMPACT ON STAKEHOLDERS	As a coffee roastery, Reunion Coffee Roasters contributes to global carbon emissions by using natural gas as part of the roasting process.
IMPLEMENTED MGT PRACTICES	Reunion Coffee Roasters minimizes local environmental impact of its coffee roasting by utilizing afterburners. Attached to each of the two roasters, Reunion's afterburners oxidize the waste gases that stem from roasting. This means reduced smoke, odor, volatile organic compounds and carbon monoxide from commercial roaster exhaust. An afterburner is therefore a pollution control device that allows roasters to comply with environmental regulations. In addition to utilizing afterburners as a pollution control device, Reunion Coffee Roasters offsets 100% of its energy usage with BullFrog Power, a renewable energy provider. Reunion Coffee Roasters' Target Strategy of reducing annual hydro and water usage by 5% relative to pounds of coffee produced provides a framework to ensure the company is both in compliance with environmental regulations, as well as meeting internally set environmental goals. There are currently no industry standards against which Reunion Coffee Roasters can assess its energy usage and emissions. Reunion Coffee Roasters ensures that the company manages environmental standards based on local laws and regulations as best practices.
