*Empowering people for
a more sustainable future*

2022

BRAND PRESENTATION

**Every year,
8 million tons
of plastic waste
escape into
the ocean.**

A full-page background image showing a diver in a black wetsuit and mask underwater. The diver is holding a clear plastic bag that contains a white, hand-shaped object. The water is a deep teal color with some bubbles and light reflections on the surface.

**As a result,
single-use plastic
items are being
banned worldwide.**

Already in **Mexico** single-use plastics are **banned**.

In the **European Union**, the prohibition in the use of plastics starts on July 2021.

In October 2021, in **Chile**, the law of **No use of single use-plastics** will start to be enforced, which affects restaurants, hotels and catering.

Restaurants in **Canada** are **banning plastics**.

It is a world trend, Canada, Uruguay, Costa Rica, California, Connecticut, Delaware, Hawaii, Maine, New York, Oregon, and Vermont and others, are already partially banning single-use plastic, or creating their plastic law.

Certified

®

Corporation

- Certifying as a B Corporation goes beyond product or service level certification.
- B Corp Certification is the only certification that measures a company's entire social and environmental performance.
- The B Impact Assessment evaluates how your company's operations and business model impact your workers, community, environment, and customers.

Let's CLICKEAT®

We believe that **everyone could be an agent of change** if the market gives them the opportunity to do so.

We believe that, given the tools, **everyone can replace single-use plastics with noble materials.**

As **agent of change**, we need to create the needed products so people can **reach out to a sustainable future.**

In **ClickEat**, through **patented designs and innovation**, we create added value products that replace single-use plastic products with **sustainable alternatives**.

People buy our products because of their **design and functionality**, and doing so, they help the environment.

LEGEND-ICONOGRAPHY

Backyard compostable.

and industrially compostable.

Can be customized.

-4°F to 113°F.

32°F to 248°F.
Microwave and oven safe.

Plant-based inks.

No glue.

CERTIFICATIONS

We are supported by the brand "Foods From Chile, Source of Life", an image that allows agricultural entrepreneurs to have a common seal, which reflects the imprint and quality of Chile's agri-food industry in international markets. Having the authorization for the use of the Chile trademark allows us to increase our reputation, credibility and competitiveness. Associating our brand Simplo with that of Chile strengthens our value proposal in the foreign markets.

We certify your biodegradable products in accordance with DIN EN 13432 and, if applicable, other national and international standards, and award the two internationally recognized certification marks: our "DIN-Geprüft industrially compostable" test mark and the "Keimling" compostability mark of European Bioplastics e. V. Both marks can be used individually, alternatively or simultaneously, and document the degradability of your products.

Plastics and packaging with our NF T51-800 certification guarantee consumers complete compostability in their own backyards.

Being FSC certified demonstrates that you meet the highest social and environmental standards in the market. Public concern about the state of the world's forests and timber resources is growing and FSC gives you a reliable solution to complex environmental and social issues.

This implementation and certification gives confidence to its customers of the correct compliance with the legal requirements of the Food Sanitary Regulation, which establishes the obligation to establish Good Manufacturing Practices, as well as implementing the Hazard Analysis and Critical Control Point methodologies throughout its production line.

ISEGA

ISEGA is an independent testing and certification institute that performs tests to confirm the compliance of materials and chemicals used for food packaging production.

New consumer products for people must be FDA approved before they are marketed in interstate commerce. This means that a company must demonstrate that its drug or biological product is safe and effective for the intended use, and that it can manufacture the product to federal quality standards.

BACKYARD COMPOSTING

Nature doing nature's job.

Can be composted in every-day settings, like your own backyard, producing nutrient rich soil.

Even if it end up in a landfill it will decompose faster than other products.

INDUSTRIAL COMPOSTING

It requires industrial intervention, high temperatures need to be applied to the material.

Faster biodegradation of organic material, but it can only be composted in certain settings.

Produces high quality toxic-free compost, due to the controlled conditions of the process

DUO

Wooden knife and fork cutlery

STRONG

Patented single piece construction allows the fork to pierce a raw carrot, the knife to cut anything from a steak to a tomato.

LIGHTWEIGHT

Weighing about 3/4 the weight of comparable plastic, ClickEat is strong but also lightweight, making it easier on the hand and less expensive to ship.

HYGENIC

Since the product has to be opened for use, the consumer has peace of mind that it has not been used or tampered with before. It can also come in a paper sachet, aiding the concept of non-manipulation.

Backyard Compostable.

Can be customized.

-4°F to 113°F.

32°F to 248°F.
Microwave and oven safe.

6.9 × 1.6 in
1 set (fork + knife)
Material: Wood

The fork ready to pierce and the knife ready to cut.

Easy to split,
easy to use.

ClickEat is strong
but also lightweight

WILD STRAW

Rye straws

ALL NATURAL

Wild straws are extracted from rye fields. They are 100% cereal stalk so they are compostable and chemical free. At the end of their use they can be returned to the ground, avoiding contamination.

STRONG

They stay strong in hot and cold liquids. Their different sizes are suitable for a variety of uses, from stirring your coffee to drinking a milkshake.

COMMUNITY

Our straws are extracted in Lolol, a small town in Chile. We work together and support the community.

ECONOMIC

The Wild Straws are a memorable and an economically viable alternative to plastic, paper and bioplastic straws and is truly "Backyard compostable". It came from the Earth, it becomes Earth...

HYGIENIC

We have the HACCP Certificate, which approves the hygiene in the production and distribution processes.

They are not built, they are grown

Backyard Compostable.
