

DISCLOSURE MATERIALS

Certified B Corporations must complete a Disclosure Questionnaire to identify potentially sensitive issues related to the company (e.g. historical fines, sanctions, material litigation, or sensitive industry practices).

This component does not affect the company's score on the B Impact Assessment. If the company answers affirmatively to any items in the Disclosure Questionnaire and B Lab deems them to be material, the company must:

- 1) Be transparent about the disclosure issues identified on the company's public B Impact Report
- 2) Describe how the company has addressed this issue.
- 3) Demonstrate that management systems are in place to avoid similar issues from arising in the future.

In all cases, the Standards Advisory council reserves the right to refuse certification if the company is ultimately deemed not to uphold the spirit of the community.

In addition to the voluntary indication of sensitive issues in the Disclosure Questionnaire, companies pursuing Certification also are subject to background checks by B Lab staff. Background checks include a review of public records, news sources, and search engines for company names, brands, executives/founders, and other relevant topics.

Sensitive issues identified through background checks may or may not be within the scope of questions in the Disclosure Questionnaire, but undergo the same review process and are subject to the same possible review by the Standards Advisory Council, including ineligibility for B Corp Certification, required remediation, or disclosure.

This document contains a copy of the company's completed Disclosure Questionnaire and related disclosure documentation provided by the company.

DISCLOSURE QUESTIONNAIRE CATEGORY	Environmentally Intensive Industries
TOPIC	Energy and Emissions Intensive Industries
SUMMARY OF ISSUE	As a manufacturer of LED lighting equipment, RBW operates in an industry in which energy and carbon emissions are material environmental issues. Aspects of the manufacturing industry that make it energy and emissions-intensive include the use of manufacturing machinery, materials sourcing, and the use of environmentally taxing metals and materials.
SIZE/SCOPE OF ISSUE (e.g. \$ financial implication, # of individuals affected)	The company derives 100% of its revenue from LED lighting manufacturing. Lighting units are manufactured in the company's Kingston, New York Facility with domestic and imported components.
	RBW utilizes electricity derived from wind and solar generation in their operations. Shipping is the largest and main contributor to their carbon footprint. The company does not measure CO2 emissions or an overall impact related to the manufacturing operations.
IMPACT ON STAKEHOLDERS	As an energy-intensive industry, manufacturing poses risks such as energy and resource waste. Additionally, producing electrical fixtures and lighting has historically been a toxin-intensive industry with uses of lead, arsenic, and mercury.
	The company manufactures LED lighting with approximately 50% of their product line made from Red List approved materials that have been deemed non-toxic and safer than alternatives.
	The company's most significant impact is shipping and distribution of their finished products which are all manufactured and distributed from one facility. The company does not track shipping emissions or footprint at this time.
IMPLEMENTED MGT PRACTICES	RBW is currently working towards carbon negative operations by 2030. They are actively increasing their electricity usage sourced from green energy with the help of their municipality, and aim to reach 100% green electricity. The manufacturing facility is cooled, heated, and electrified through renewable energy. A lighting control system that includes occupancy sensors and daylight harvesting as well as retrofitting the building with energy-reducing material skylights, insulation, and programmable thermostats all reduce energy usage. In addition to the facility, products are engineered with high-efficiency LEDs that consume less electricity over a life cycle and there are multiple product lines made from Red List approved materials as identified by the International Living Future Institute.
