

Malleable Jewellers

Disclosure Report Date Submitted: May 13th, 2024

Disclosure Materials

Certified B Corporations must complete a Disclosure Questionnaire to identify potentially sensitive issues related to the company (e.g. historical fines, sanctions, material litigation, or sensitive industry practices).

This component does not affect the company's score on the B Impact Assessment. If the company answers affirmatively to any items in the Disclosure Questionnaire that B Lab deems relevant for public stakeholders, then, as a condition of their certification, the company must:

- Be transparent about details of the disclosure issues identified on the company's public B Impact Report
- 2) Describe how the company has addressed this issue
- 3) Demonstrate that management practices are in place to avoid similar issues from arising in the future, when necessary.

In all cases, the Standards Advisory council reserves the right to refuse certification if the company is ultimately deemed not to uphold the spirit and integrity of the community.

In addition to the voluntary indication of sensitive issues in the Disclosure Questionnaire, companies pursuing Certification also are subject to a background check by B Lab staff. Background checks include a review of public records, news sources, and search engines for company names, brands, executives/founders, and other relevant topics.

Sensitive issues identified through background checks may or may not be within the scope of questions in the Disclosure Questionnaire, but undergo the same review process and are subject to the same possible review by the Standards Advisory Council, including ineligibility for B Corp Certification, required remediation, or disclosure.

B Lab's Public Complaints Process

Any party may submit a complaint about a current B Corp through B Lab's Public Complaint Process. Grounds for complaint include:

- Intentional misrepresentation of practices, policies, and/or claimed outcomes during the company's certification process
- 2) Breaches of the B Corp Community's core values as expressed in our Declaration of Interdependence

This document contains a copy of the company's completed Disclosure Questionnaire and related disclosure documentation provided by the company.

Please indicate if any of the following statements are true regarding your company's significant suppliers.		
Business in Conflict Zones		V
Child or Forced Labor		\checkmark
Negative Environmental Impact		V
Negative Social Impact		\checkmark
Other		✓

Disclosure Questionnaire Statement

Disclosure Questionnaire Category: Industries at Risk for Human Rights Violations

Topic	Company sells jewelry with precious metals and precious stones
Summary of Issue	Malleable Jewellers is a jewelry retailer whose products utilize precious metals and gemstones - raw materials that could be considered conflict minerals and pose a potential human rights risk.
Size/Scope of Issue (e.g. \$ financial implication, # of individuals affected)	75% of the company's metal supply comes from Fairmined and 15% comes from resupply/recycled precious metals. Resupply is when the company supplies recycled clients precious metals in scrap jewellery form to their refinery which refines this recycled material down and resells it at a later date. 10% of precious metals are non-recycled/non-certified. These are products that are currently not widely available in certified metals such as chains and specific findings. 100% of the company's precious gems are from suppliers that provide written assurances of non-conflict stones that follow all aspects of the Kimberly process.
Impact on Stakeholders	The use of precious metals and gemstones poses a human rights risk due to the possibility that they are sourced from conflict-affected and high risk areas, where they may be used to finance conflict and/or be associated with human rights abuses in the supply chain.
Implemented Management Practices	The company is committed to sourcing all their gold from Fairmined Eco Gold which provides a true metric for traceability, transparency and accountability. They are currently sourcing 50 gr of 24KT Fairmined Eco Gold from their supplier. By 2025 they aim to have 85% of production efforts in Fairmined or Fairtrade gold. The company timeline for transitioning into solely using Fairmined ecologically extracted metals are as follow: • June 1st 2021 = All customs wherever possible (approximately 85%). (In situations where the company is unable to solely use Fairmined Gold in the production

	 process, they will use a composite solution.) October 1st 2022 = The company's one of a kind higher value pieces made in Fairmined Eco Gold October 2025 = The remainder of their products will be made in Fairmined Eco Gold.
	This is dependent on availability. If Fairmined Eco Gold isn't available then they will use a combination of traditionally extracted Fairmined gold & silver as well as Fairtrade gold.
	In terms of their metal stock, over 75% of their metal in terms of weight purchased they house ready to use in customers orders are derived from Fairmined Certified gold or silver so the company believes they are on track to reaching their 2025 goal.
	Malleable Jewellers is randomly and independently audited by FLOCERT and the Alliance for Responsible Mining for their Fairtrade & Fairmined material.

Disclosure Questionnaire Statement

Disclosure Questionnaire Category: Water Intensive Industry

Malleable is involved in the production/sale of products, or is part of an industry that can potentially be classified as water intensive, meaning that they are more likely to have significant impacts on the environment, such as water stress or depletion of local water sources if water use is not appropriately managed. Certified B Corps are required to make transparent their involvement in such activities or industries.

Disclosure Questionnaire Statement

Disclosure Questionnaire Category: Energy and Emissions Intensive Industry

Malleable is involved in the production/sale of products, or is part of an industry that can potentially be classified as energy and emission-intensive, meaning that they are more likely to have significant impacts on the environment based on their carbon emissions associated with their operations and their contribution to climate change. Certified B Corps are required to make transparent their involvement in such activities or industries.
