Solutions

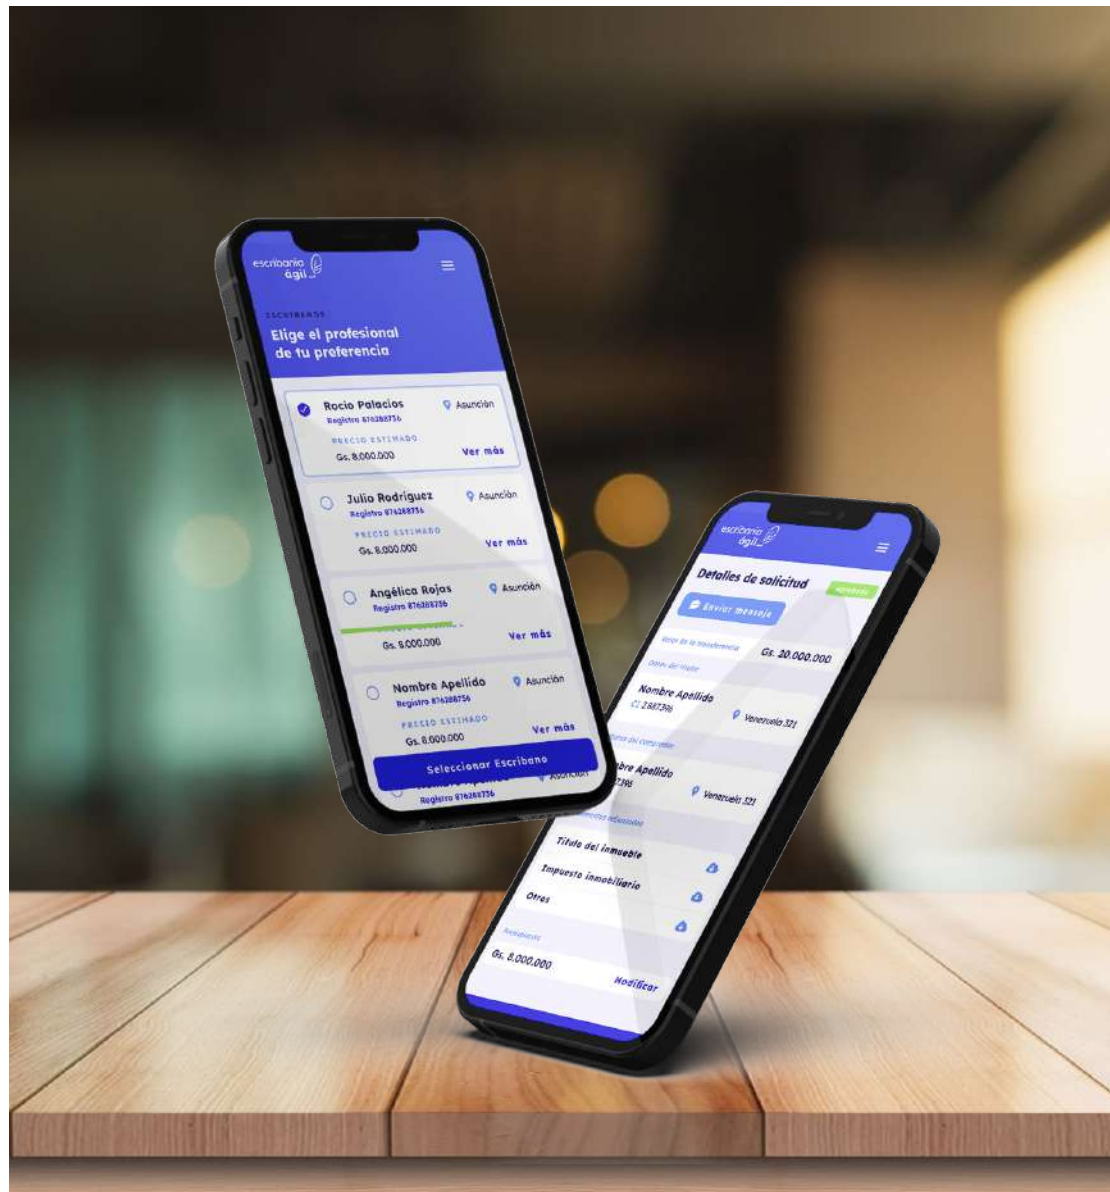

Progressive Web Apps (PWA)

PWAs are a hybrid between a web page and a native mobile app, which allows us to create a web experience that works with the same speed and smoothness as a native app.

iOS and Android Apps

Using our custom agile project management methodology and best-in-class open source and proprietary development frameworks, we are able to deliver highly performant apps in no time.

Solutions

No-Code and Low-Code Development

We help companies of all sizes launch software products in a fraction of the time and cost of traditional software development.

MVP & Agile approach

The formal definition of a Minimum Viable Product states that it is the fastest way to add new functionality to a product through the build-measure-learn cycle. This idea goes back to the lean startup approach, a business framework that considers your product's growth from the very beginning.

Our process

1

Gathering requirements

Our initial meetings are all about getting our arms around your vision. From there we can plan a roadmap, choose the best technologies for the product, and create a team that fits for the project.

3

Development

Theory translates into practice when we build the solution and its systems, security protocols, permissions, integrations, and features.

2

UI/UX

We start with sketches that capture your app's look and feel. With your users' needs front and center, we design eye-catching, intuitive interfaces that reinforce your brand, build loyalty, and drive growth.

4

Support and maintenance

Innovation has no finish line. After we deliver the solution, we're still at your disposal for updates, support and maintenance.

Why choose us?

Deliverables

- All the idea and process documentation (MVP Scope and Feature Set, Implementation Timeline, User manual, Product Specs).
- High-Fidelity Designs.
- All source code files.
- Product launch.

We create solutions that are scalable, flexible, and most importantly, secure.

Cost & Timeline

- 4+ people Team (Team Leader + Backend Dev + Frontend Dev + UX/UI Designer)
- Investment: A minimum of \$10,000. Prices vary depending on the complexity of design and functionality.
- Effort and Time: 12-52+ weeks (based on scope).

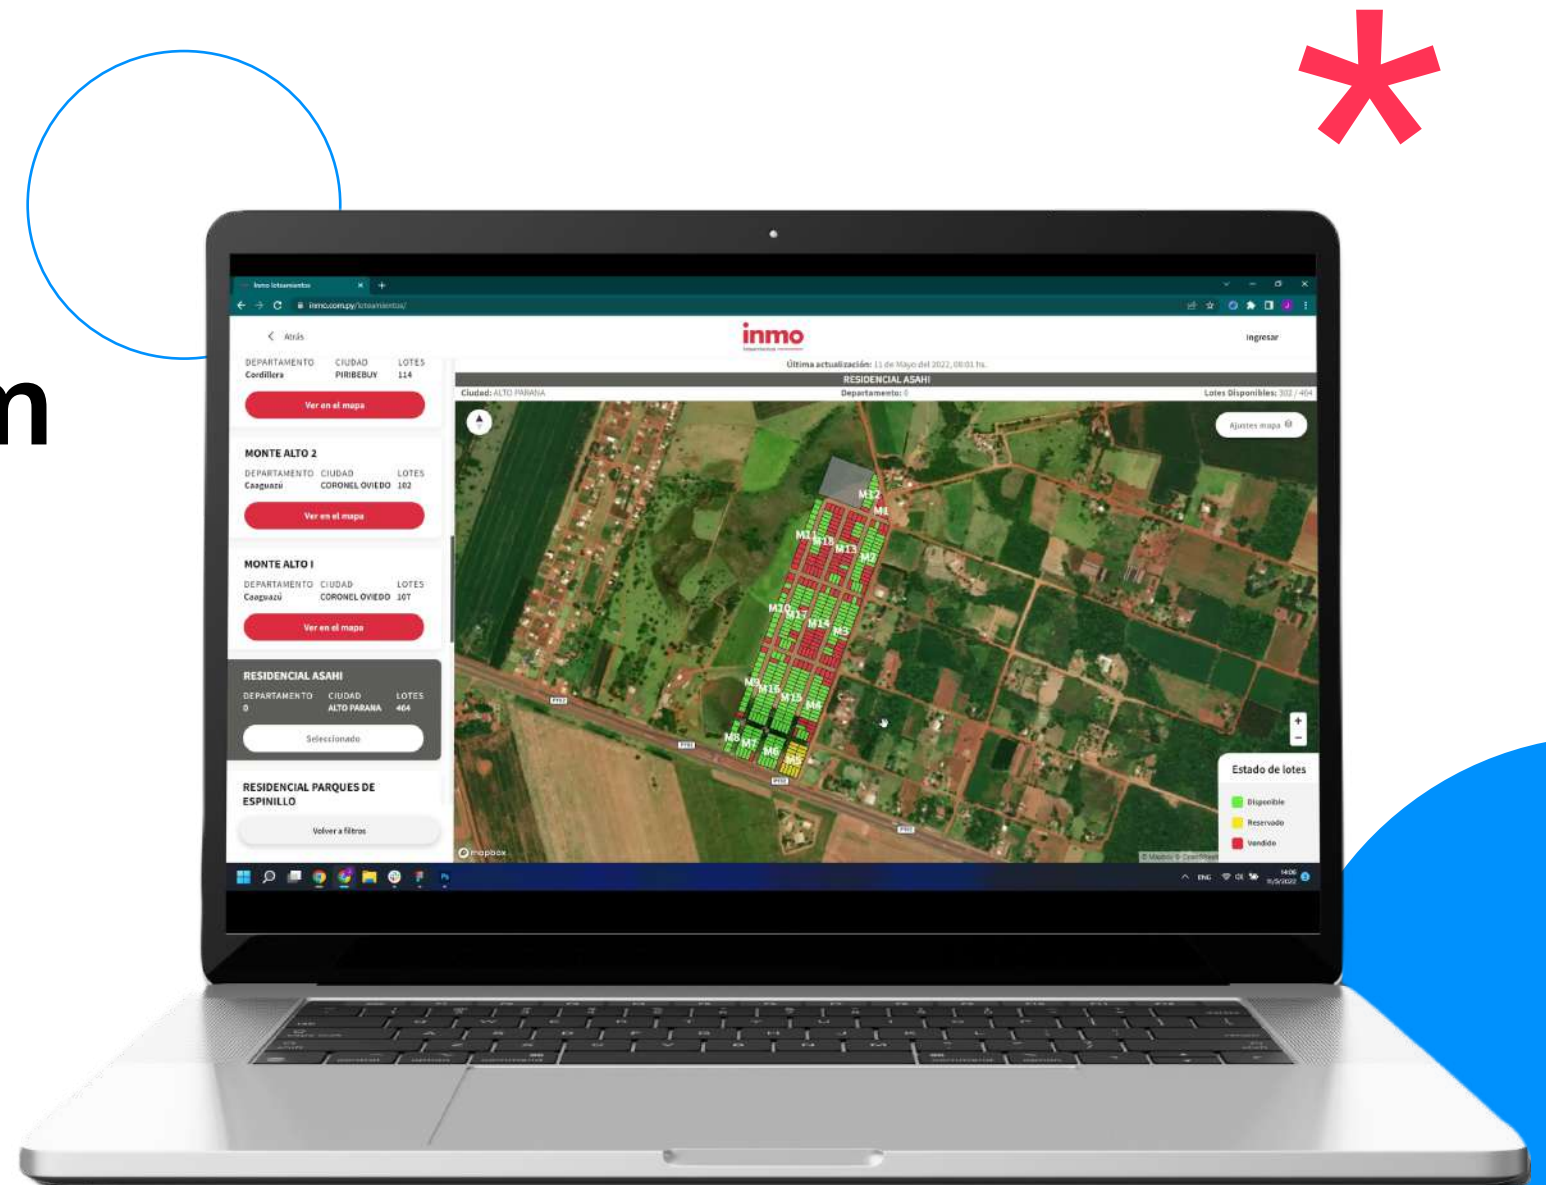

CASE STUDIES

Real Estate Lots Management Platform

INMO is a real estate agency which sought to offer its customers a solution that allowed them to find and buy lots in different parts of the country, in a detailed and comfortable way.

They also wanted their customers to be able to see their billing record, make payments and update any contact information from anywhere in the world.

CASE STUDIES

Public Schools Situation platform

A web app that harnesses open government data from three ministries (Education, Public Contracts, Treasury) and enriches them with data produced by citizens, facilitating collective action activities to showcase, identify, and prioritize investments in education infrastructure, while simultaneously exposing irregularities such as fraudulent use of funds and corruption, all of this in an easy to use interactive map.

CASE STUDIES

Speech Therapist for children App

Aguara is a mobile app for diagnosing speech difficulties in children from ages between 3 to 6 years old.

This app is exclusively available for tablets, taking into account that these devices have an ideal size for children, attracting their natural curiosity.

The app offers the possibility of gathering information (Voice Recording and Drag n Drop answers) in a playful and attractive way for a child, so that later the professional can make a diagnosis about the difficulty that the child may have.

CASE STUDIES

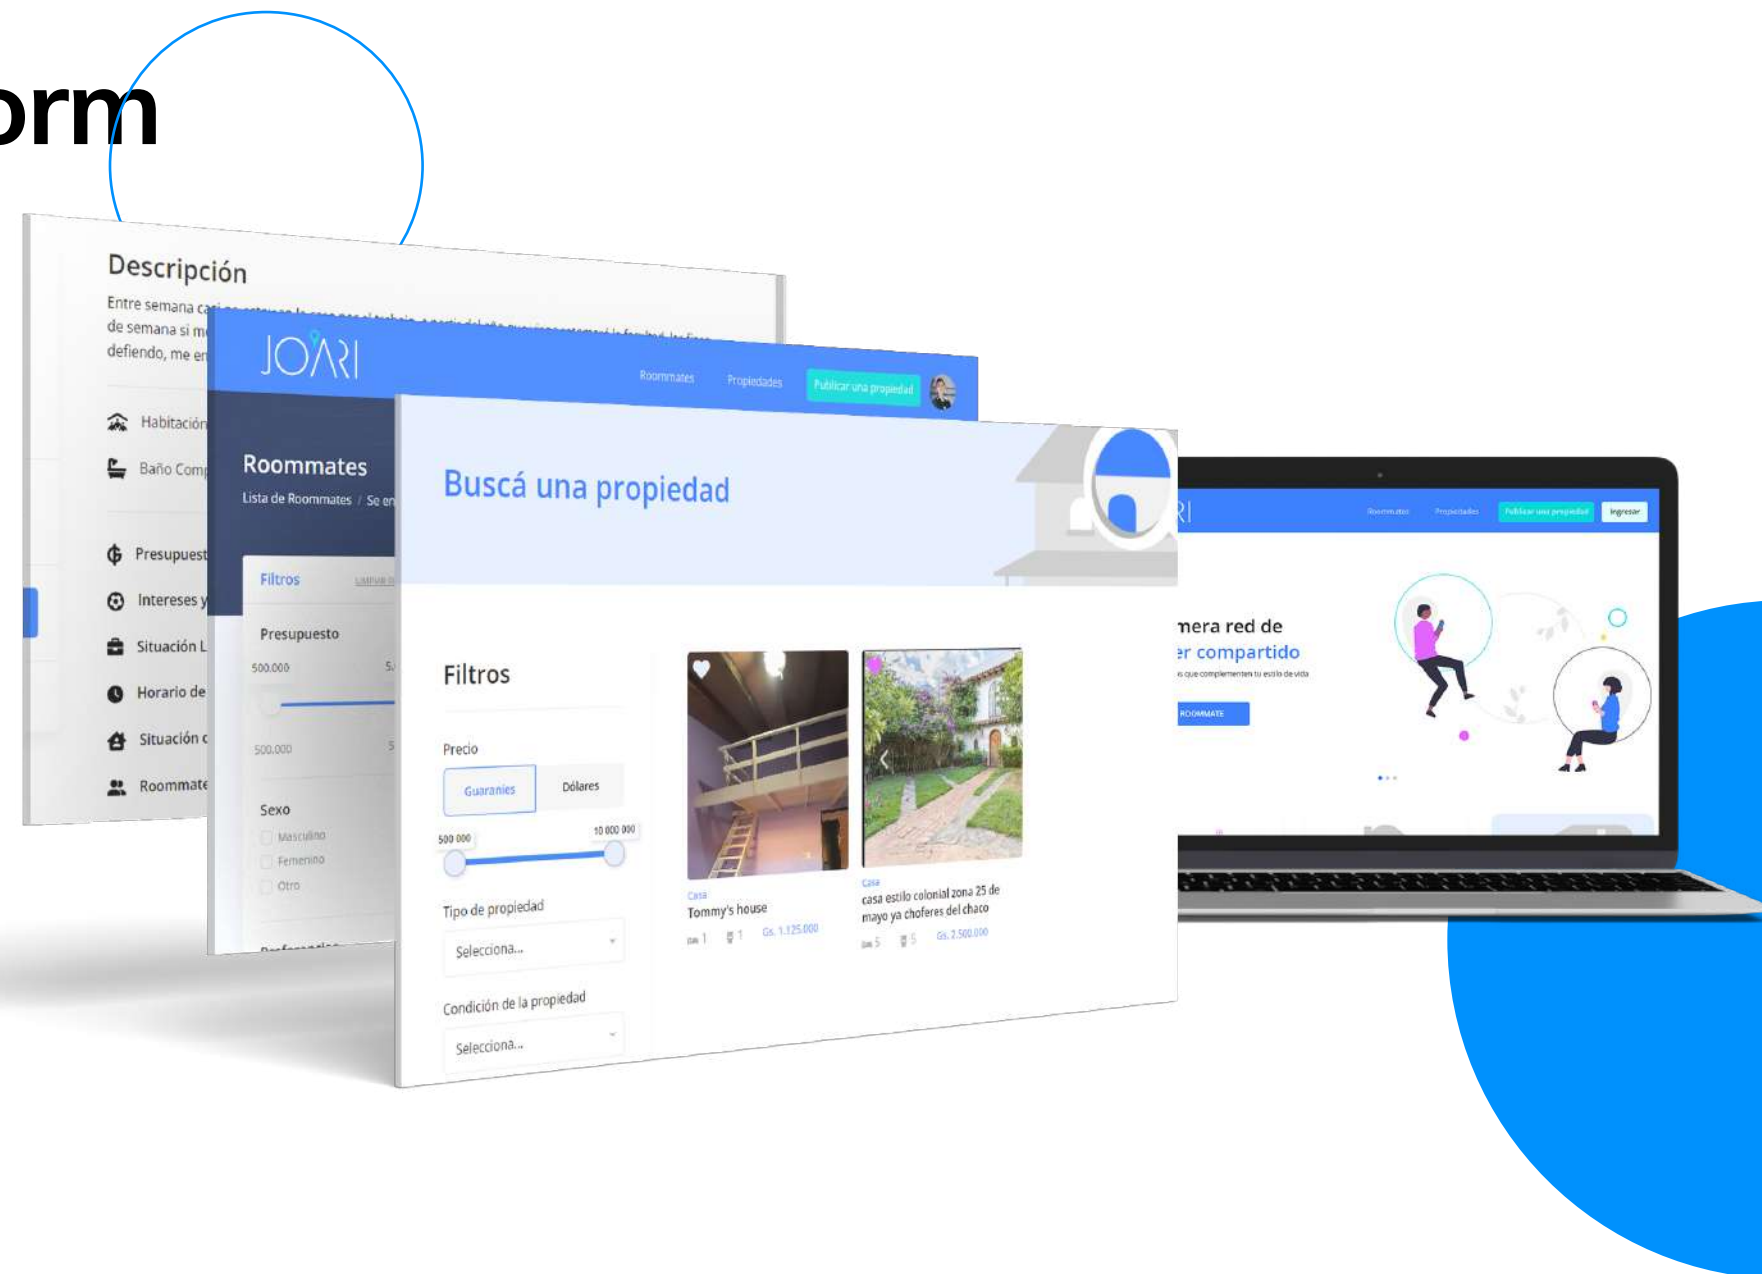

Roomate Finder Platform

We were part of the relaunching of Jo'ári, the first shared rental platform in Paraguay.

It works as a social network that helps find users who want to share resources to live better and closer: work, faculty, projects and interests.

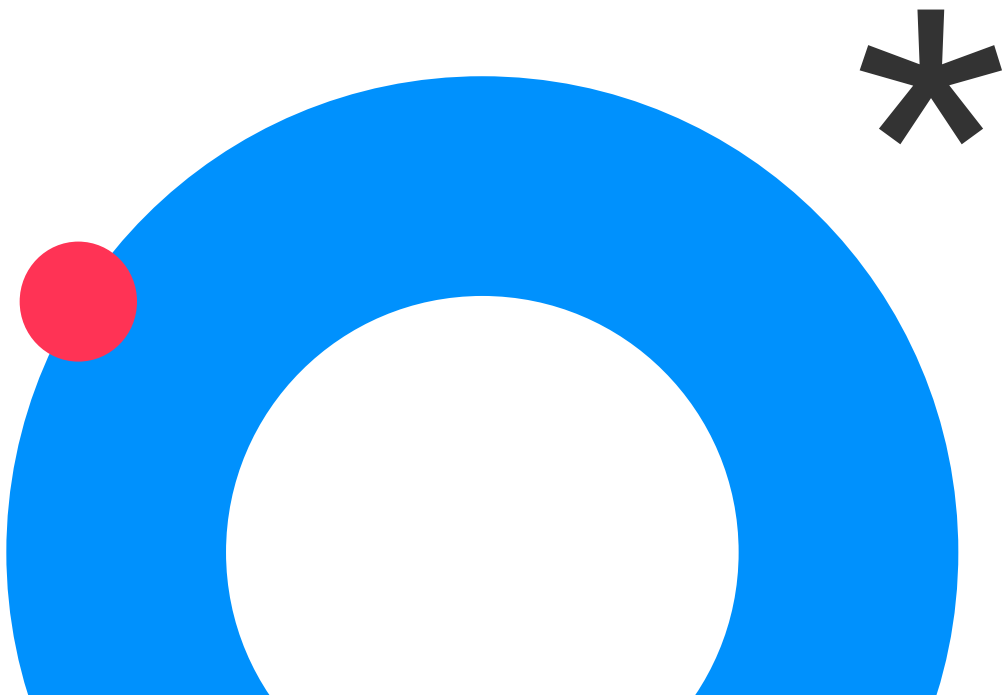

On this platform people can find their ideal roommate according to the characteristics provided on each person's profile. Or if they have a property available for rent, they can list it on here too to find roommates or just tenants.
