WHAT is *eForms*?

BizPro's eForms module is a web-based, enterprise-level, dynamic Forms Management System designed to meet the structured data collection and reporting needs of business small to large. This module provides a generic, turnkey solution for Forms Management – handling everything from design to implementation, with built-in functions that hide or show parts of a form based on form responses, send notifications, or launch tasks and/or workflows automatically.

WHAT is *Planner*?

BizPro's Planner module is a web-based, enterprise-level Business Process Management system. Planner improves operational efficiency and effectiveness by administering an advanced and highly reliable task and workflow system, enterprise-wide. Users gain insights into their performance from intuitive, powerful dashboards, and managers benefit from access to extensive business process information for continuous improvement.
