## Disclosure Materials

Certified B Corporations must complete a Disclosure Questionnaire to identify potentially sensitive issues related to the company (e.g. historical fines, sanctions, material litigation, or sensitive industry practices).

This component does not affect the company's score on the B Impact Assessment. If the company answers affirmatively to any items in the Disclosure Questionnaire that B Lab deems relevant for public stakeholders, then, as a condition of their certification, the company must:

- 1) Be transparent about details of the disclosure issues identified on the company's public B Impact Report
- 2) Describe how the company has addressed this issue
- 3) Demonstrate that management practices are in place to avoid similar issues from arising in the future, when necessary.

In all cases, the Standards Advisory council reserves the right to refuse certification if the company is ultimately deemed not to uphold the spirit and integrity of the community.

In addition to the voluntary indication of sensitive issues in the Disclosure Questionnaire, companies pursuing Certification also are subject to a background check by B Lab staff. Background checks include a review of public records, news sources, and search engines for company names, brands, executives/founders, and other relevant topics.

Sensitive issues identified through background checks may or may not be within the scope of questions in the Disclosure Questionnaire, but undergo the same review process and are subject to the same possible review by the Standards Advisory Council, including ineligibility for B Corp Certification, required remediation, or disclosure.

# Disclosure Questionnaire Statement

## Disclosure Questionnaire Category: Supply Chain Disclosure

<b>Topic</b>	Environmental Risks in the Supply Chain
<b>Summary of Issue</b>	<p>Daléro is a Dutch B2B supplier specializing in composite (glass fiber reinforced plastic, GRP) profiles and gratings, serving markets across Europe. They sell both standard and fully customized products using pultrusion and molding processes to create lightweight, durable, and corrosion-resistant components. The company is not involved in the production process. The suppliers of the Dalero produce the profiles, that are made of glass and polymer.</p> <p>These suppliers manufacture the panels using resin and polyester, which are combined to create the final composite material. By the production of polymer (plastics) fossil fuels are used. The resin and glycols used are petroleum-based. The end product consists of approximately 35% resin, 60% glass fiber, and 5% fillers. This composition is similar to materials used by companies producing durable plastic-based products. Unlike many products in sectors like food or cosmetics, the company's materials are not single-use plastics.</p>
<b>Size/Scope of Issue</b> (e.g. \$ financial implication, # of individuals affected)	90% of Dalero's products are produced by two of its suppliers that are involved in the process of polymer production.
<b>Impact on Stakeholder(s)</b>	The use of fossil fuels in the production of resin and polyester releases CO <sub>2</sub> emissions, which have a negative impact on the environment.
<b>Implemented Management Practices</b>	<p>The production process used by the company's suppliers is standard within the industry and complies with all relevant safety regulations. Suppliers have precautionary systems in place—such as fume extraction units—to minimize exposure to emissions during manufacturing. In addition, government authorities regularly inspect these facilities. These production facilities operate under strict safety and environmental protocols. Regular audits and government inspections help ensure compliance with relevant standards.</p> <p>Daléro has proactively developed a self-assessment framework to regularly evaluate and improve the safety and sustainability</p>
