

Overdose Detection for Supportive Housing

Small safety buttons that allow supportive housing residents to request a safety check before they use drugs alone

Protect Residents & Staff with Brave Buttons

Supportive housing operators use Brave Buttons to connect people at risk of overdose to staff and peer support, ensuring safe(r) drug use and keeping residents alive.

- ✓ Help prevent overdose deaths.
- ✓ Protect frontline workers from trauma and burnout.
- ✓ Save \$400 for every dollar you invest in Brave.*

*Impactable X (October 2021), Brave Social Impact Report

Overdose Detection Saves Lives

- ✓ 651 buttons installed
- ✓ 16 buildings
- ✓ 5,000+ button presses
- ✓ 221 supervised uses
- ✓ 100 overdoses detected
- ✓ 187 unsafe situations de-escalated

Affordable, Trusted & Reliable

-  **Affordable:** Low per-button licensing fee and one-time set-up fee
-  **Easy-to-use:** Simple for residents and staff; online training provided
-  **Monitored:** Alerts guaranteed to reach your team
-  **Maintained:** New features and updates automatically applied

“[The Brave system] is incredible. I just love the peace of mind it’s given me, especially on graveyard [shifts]. It’s given the whole building more of a sense of security.”

~Building Manager, RainCity

How Brave Buttons Work

1. Install Brave Buttons in each unit and common area.
2. Residents press a button once to request a non-emergency check-in, or more than once to indicate an emergency.
3. The Responder Phone receives a text message with details on where help is needed and how urgently.
4. Your designated responder checks that location.
5. After they check in with the resident, they can log details about what happened.
