[accounting entry file]

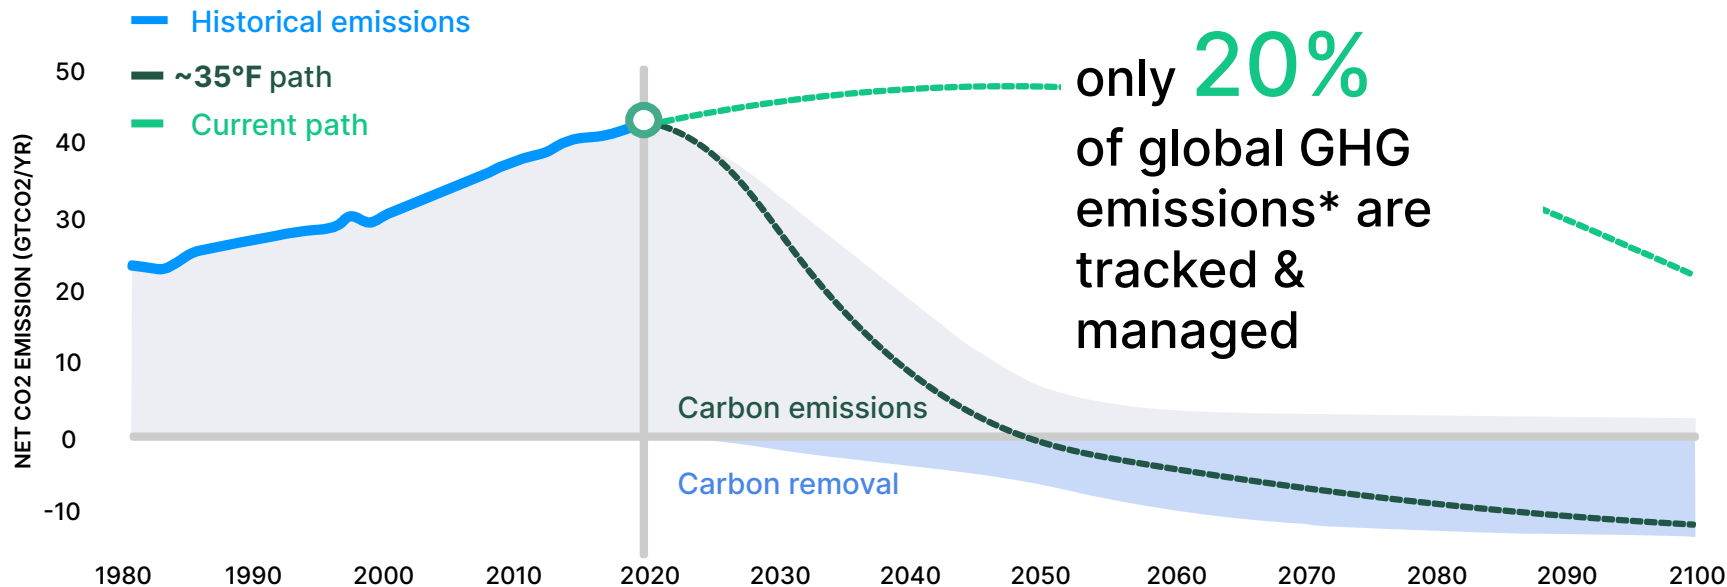

*Today, only about 20% of global emissions are tracked and managed. At Greenly, we think this market must be radically disrupted by offering simple to use, affordable software for any business type, making carbon accounting & management as pervasive as financial management. This is the only way to put businesses on a path to Net Zero and limit global warming.*

Alexis Normand  
Co-Founder & CEO of Greenly

# Carbon accounting must scale massively to limit global warming by 35°
