Batch Upload

Merchant can import a .CSV, .XLS or .TXT file for manually processing large amounts of transactions. The program will create 16 parallel threads that will simultaneously process transactions (50,000 transactions can be processed within 90 minutes).

Features

Batch program will provide auto-detection of file formats. Ex: XX.XX as dollars, 14-16 digits as a credit card, etc. Batch formats can be saved for future use.

Home / Batch Upload

[View Batch History](#) [Configure Formats](#) [Upload Batch](#)

Upload Batch

You may upload a .CSV (Comma Separated Value), an .XLS or .XLSX (Microsoft Excel), or a .TXT (Text) file.

Gateway Options

Various options that make Virtual Terminal customizable for your needs.

Gateway Options Main Menu

Home / Gateway Options

Choose a category of options from the list below.

General Options

Account Information
Modify your contact information, billing information, and time zone setting.

User Accounts
Manage your user accounts and permissions.

License Manager
Manage Licenses for Mobile Devices

Look and Feel
Customize the look and feel of various customer communications.

Transaction Options

Settlement Schedule
Set preferences about when your transactions are settled.

Merchant Defined Fields

There are 20 merchant defined fields available for use. These fields will cascade into reporting sort and search options.

Home / Gateway Options / Merchant Defined Fields

Merchant Defined Fields

Merchant Defined Fields can be passed using the API, QuickClick or Virtual Terminal. The Virtual Terminal will display the name of the field as labeled below. Definitions are also used in reports.

When passing these fields through the API connection, please reference the variable names as merchant_defined_field_1, merchant_defined_field_2, etc.

Merchant Defined Fields	Name	Action
Merchant Defined Field 1	Location	
Merchant Defined Field 2	--	
Merchant Defined Field 3	--	
Merchant Defined Field 4	--	
Merchant Defined Field 5	--	
Merchant Defined Field 6	--	
Merchant Defined Field 7	--	
Merchant Defined Field 8	--	

AVS Settings

This page will allow merchants to set rules about accepting transactions that return with address-specific return codes. They can choose to reject transactions that may contain suspicious activity.

[Home](#) / [Gateway Options](#) / [Address Verification](#)

Address Verification

Choose when you want the transaction rejected

Select the conditions for which the Payment Gateway should reject a transaction due to a mismatch between the billing address provided with the transaction and the address on file with the customer's credit card company.

Processor

CC Processor A **US Domestic**
 Non-US International

Reject a U.S. Transaction if...

- Address information is not provided for AVS Check (B)
- AVS Error (E)
- Non US Card Issuing Bank (G)
- Retry, system is unavailable (R)
- AVS is not supported by card issuing bank (S)
- Address information for cardholder is unavailable (U)

Street Address Matches AND...

- First 5 digits of Zip Code Match (Y)

CVV Settings

This page will allow merchants to set rules about accepting transactions that return with CVV-specific return codes. They can choose to reject transactions that may contain suspicious activity.

[Home](#) / [Gateway Options](#) / [Card ID Verification](#)

Card ID Verification

Choose when you want the transaction rejected

Select the conditions for which the Payment Gateway should reject a transaction when the Card ID submitted does not match the value on file with the customer's credit card company.

Processor

CC Processor A **US Domestic**
 Non-US International

Reject a U.S. Transaction if...

- Is NOT Processed or CVV was not Provided (P)
- Does NOT Match (N)
- Should be on card, but is not indicated (S)
- Issuer is not certified or has not provided encryption key (U)

User Accounts

Create and manage sub-users with customer permissions and notification levels.

Home / Gateway Options / User Accounts

Load Balancing (ATRI)

Patent pending intelligent transaction routing from a single merchant to multiple processors. Ex: merchant requires \$100,000 per month. Processor A will only approve \$50,000. Two additional processors can be added, B and C for \$25,000 each. Transactions will be intelligently routed by dollar amount or percentage. For more information on setup, refer to the ATRI Guide.

Certify PCI™

CertifyPCI™ was designed specifically to streamline the PCI Certification process in an effort to help merchants easily achieve a higher level of security. It is an automated, web based process to PCI certify qualified merchants in minutes. \$50,000 per occurrence Merchant Breach Insurance available, transparent product offering to your customers, assistance with Self Assessment Questionnaire (SAQ), Vulnerability Scanning including unlimited scans, downloadable PCI Certification Report.

New Merchants

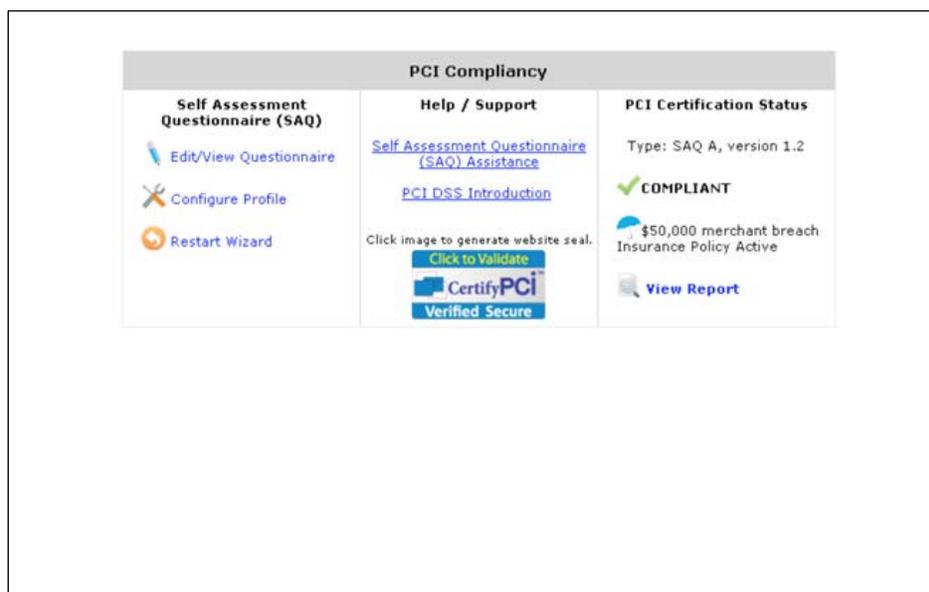

New merchants will need to answer the Self Assessment Questionnaire to begin certification.

Returning

Merchants

Returning merchants will need to answer the Self Assessment Questionnaire yearly to maintain compliance.

QuickBooks™

- Link allows the merchant to export gateway transactional information into QuickBooks™.

Integration

- API documentation, shopping care references, Quickclick (shopping cart included with the gateway and programming examples).

iSpyFraud™

- A rule-set based fraud management utility that allows merchants to configure extensive filters to help them in detecting fraud and screening suspicious transactions.
- Extensive reporting system gives merchants a quick and easy way to review transactions, block suspicious activity and zero in on malicious users.
- Looks at transactions both before and after processing and can decline transactions before and after authorization.
- The successful implementation and reduction in chargebacks across numerous merchants has been a testament to the effectiveness of this product.
- Example parameters are: 1. If a user charges credit card over [2] times for [Attempted] transactions, then [Deny Transaction]. 2. If daily [Attempted] transaction count for Credit Card exceeds [3], then [Flag for Review].

Easy-to-use Management Tools

- iSpyFraud™ management tools give merchants quick and user-friendly control over their online fraud security system.
- Control Panel allows merchants to maintain their own good and bad customer list, edit filters, restrict access by banning IPs and set up and maintain filter controls. Possible filtering criteria include but are not limited to: IP Address, Email Address, Transaction Count, Dollar Amount, IP Velocity check, Dollar Velocity check, Country, US/non-US IP Ban and much more.

Complete Protection

- Properly set fraud filters eliminate the majority of fraudulent transactions in real time. The selected filters can be customized for each merchant, which are continuously updated to keep the merchant one step ahead of the fraudsters.
