2015 BMW 7 Series

BMW 740Ld xDrive with BMW Advanced Diesel

As of March production, the BMW 7 Series becomes the latest US model line to benefit from BMW **Advanced Diesel** technology with the **all-new 740Ld xDrive** Sedan, launching as a model year 2015 addition to the line up. This model features BMW's N57 TU 3.0-liter 6-cylinder TwinPower Turbo diesel engine in the long-wheelbase 7 Series with xDrive. It made its US debut at the Chicago Auto Show in February 2014.

Based on the product configuration of its 740Li xDrive counterpart, this diesel version offers a similar level of standard equipment but has its own unique attributes:

- BMW TwinPower Turbo technology with VTG (Variable Turbine Technology)
- Maximum power output **255 HP @ 4000 rpm**
- A single turbocharger with variable vane turbine technology results in increased maximum torque output of **413 lb/ft** between 1500 and 3000 rpm.
- **0 to 60 mph in 6.1 seconds**
- The latest common rail high-precision diesel injection system contributes to a **significant fuel efficiency advantage** and reduction in emissions vs. the 740Li xDrive
