

Important Note on Hole Cutout Size!

These style doors require a hole cutout with radius corners – If you try to mount this door in a cutout with square corners, the frame will not cover the opening completely (See Exhibit 1)

If you do not already have an existing cutout, it is best to wait until you receive the door. Hold the door in its desired mounted location, and then trace around the cutout surface to draw your cutout hole.

If you already have an existing cutout with square corners you can either-

- Consider purchasing a Starboard framed door which installs in square corners
- Expand your cutout by 9/16" in all directions while cutting a radius in the corners. This will effectively increase your opening width by 1 1/8" as illustrated in exhibit 2.

Note: Make sure that you order a door that will fit your (now larger) hole cutout.
