CST-100 STARLINER SPACECRAFT

Repeatable Performance
The Starliner spacecraft can be reused up to 10 times.

Connected
The Starliner features Wi-Fi (in-flight movies, anyone?), tablets and GPS.

What Lies Beneath
An innovative, weldless honeycomb design reduces weight and cost.

What’s in a Name?
The Crew Space Transportation-100, or CST-100, Starliner gets its name from Boeing aircraft heritage. The number 100 stands for the distance in kilometers from Earth to the edge of space, commonly called the "Kármán line." The Starliner identity was inspired by the stars, which serve as overhead markers, guiding us on our journeys and motivating us to explore new places.

Kármán Line
100 kilometers

Boeing Blue
That blue glow you see inside is Boeing LED Sky Lighting technology, which can be featured in the Starliner spacecraft. The blue color gives a sky effect to make the capsule feel and appear roomier inside.
