Medium	30 - 36"
Large	34 - 40"
X Large	38 - 44"
XX Large	42 - 48"

**800-327-4110**

The Soft Form® Posture Control Brace is designed to correct poor posture by gently holding the shoulders back in proper position. Elastic side panels provide support compression to stabilize the abdominal and lumbar regions for improved posture and alignment. The soft, laminate body material is comfortable against the skin and ventilated elastic side panels are breathable to keep the skin cool. May be worn underneath clothing, while sitting or during activity to correct and control poor positioning or posture. Ideal for limiting forward and downward movement of the shoulders (slouching). Helps improve poor posture and relieves pain caused by arthritis. Minimizes "stooped" posture often associated with osteoporosis. Encourages proper posture while seated for prolonged periods.

- **Two bendable Aluminum stays** provide additional support and help prevent slouching.
- **Unique laminate body material**  
Combines three materials:
  - Durable outer nylon in an attractive Beige color
  - Support foam base
  - Soft cotton inner lining*Advanced materials provide the ultimate in form and function.*
- **Criss-Cross elastic shoulder straps** are soft and comfortable to prevent pinching of the skin. Criss-cross strap design in the back for increased adjustability.
- **Ventilated elastic side panels** are made of lightweight elastic with a unique ventilated filament stitch to provide cool and comfortable compression. Panels overlap to contour the shape of the body. Provides additional support compression to the abdomen and lower back for improved posture.
- **Latex Free**

**Care Instructions:** Fasten all closures and hand wash the brace in cold water with mild soap. Remove excess water and air dry away from heat. Wash as needed.

**Wear Instructions:** Unfasten the hook and loop closure on the ventilated elastic side panels. Loosen small elastic waist and shoulder straps. Put arms through the elastic shoulder straps so that the plastic stays are on the back side and hook and loop closure is to the front. Pull side panels down to the fullest part of the abdomen and secure with hook and loop closure in the front. Side panels should provide a comfortable amount of compression and should not feel restrictive. Grab small elastic straps and pull towards the front to adjust shoulder straps and gently pull shoulders back. Secure with hook and loop.
