The Ultra High Efficiency Water Heater Model Features:

- **95% Thermal Efficiency**—Ultra High Efficiency results in less fuel consumption and greater hot water recovery.
- **ICON HD™**—Intelligent proven design combines temperature control, diagnostic codes, and system ignition functions into a single control board with a digital LCD display.
- **Low NOx Premix Power Burner**—Maintains extremely low NOx emissions while providing a high level of performance and reliability.
- **Self Compensating Negative Pressure Combustion System**—Automatically increases or decreases fuel flow when a change in combustion air is detected. This results in optimum combustion and efficiency levels as well as compensating for thinner air when installed at higher altitudes.
- **Operation Mode**—Two different digitally displayed operation modes have the capability of adjusting the temperature setting up to 180°F (82°C), and adjusting the degree setting (°F to °C, or °C to °F).
- **Intelligent Diagnostics**—An easy to use LCD display prompts the installer during start-up and provides 10 different diagnostic codes to assist in troubleshooting.
- **Venting Flexibility**—Can vent vertically or horizontally with either 2", 3" or 4" PVC, CPVC or ABS vent pipe and is approved to utilize outside air for combustion (Power Direct Vent), or inside air for combustion (Power Vent). Unbalanced venting can also be utilized, which means the air intake pipe does not have to be vented on the same external building surface as the exhaust vent (see reverse side for maximum vent lengths).
- **Supplemental Heating Capability**—Two 1" NPT side connections can easily be connected to space heating, geothermal heating or solar heating applications.
- **Factory Installed Hydrojet® Sediment Reduction System**—Cold water inlet sediment reducing device helps prevent sediment build up in the tank.
- **Vitraglas® Lining**—Bradford White tanks are lined with an exclusively engineered enamel formula that provides superior tank protection from the highly corrosive effects of hot water. This formula (Vitraglas®) is fused to the steel surface by firing at a temperature of over 1600°F (871°C).
- **Direct Spark Ignition**—Main burner is lit directly by a high voltage, low current spark from the spark rod to the burner surface for reliable, trouble-free ignitions. This results in savings of gas consumption during stand-by periods.
- **Non-CFC Insulation**—Surrounds the tank surface reducing the amount of heat loss. This results in less energy consumption, improved operational efficiencies and jacket rigidity.
- **Water Connections**—1" NPT factory installed dielectric fittings extend water heater life and eases installation.
- **Optional Concentric Vent Kit Termination**—2" or 3" termination fittings provide for only one exit opening through a wall or roof. (Subtract 10ft. for intake pipe and 10ft. for exhaust pipe when calculating total vent length).
- **Thermostatic Mixing Device**—Included.
- **Four Protective Magnesium Anode Rods**—Installed.
- **Low Restriction Brass Drain Valve**—Durable tamper proof design.

For more information on warranty, please visit www.bradfordwhite.com

For products installed in USA, Canada and Puerto Rico. Some states do not allow limitations on warranties. See complete copy of the warranty included with the heater.
**Residential Ultra High Efficiency Gas Water Heater**

For Propane (LP) models change suffix "EN" to "SX".

*Based on manufacturers rated recovery efficiency.

115V A.C. Required. Amp Draw Range = 1.0 - 1.8 amps.

---

### Meets NAECa Requirements

**General**

All gas water heaters are certified at 300 PSI test pressure (2068 kPa) and 150 PSI working pressure (1034 kPa). All water connections are 1” NPT (25mm). All gas connections are 3/4” (19mm).

All models design certified by CSA International (formerly AGA/CGA), to meet ANSI standard Z-21.10.3 and peak performance rated.

*Dimensions and specifications subject to change without notice in accordance with our policy of continuous product improvement.*

Suitable for Water (Potable) Heating and Space Heating.

Toxic chemicals, such as those used for boiler treatment, shall NEVER be introduced into this system. This unit may NEVER be connected to any existing heating system or component(s) previously used with a non-potable water heating appliance.
