IDEAS

speed, flexibility, and power of the document model; the scalability of its distributed systems design; and the freedom to run anywhere, MongoDB 4.0 enables you to standardize your apps on a single, modern data platform. Here's how:

- **Best way to work with data:** adding multi-document ACID transactions, data type conversions, native visualizations with MongoDB Charts, the MongoDB Compass aggregation pipeline builder, and the MongoDB Stitch serverless platform.
- **Intelligently place data where you need it to be:** with 40% faster shard migrations, non-blocking secondary replica reads, SHA-2 authentication, and the new MongoDB Mobile database.
- **Freedom to run anywhere:** bringing global clusters and enterprise security with HIPAA compliance to the MongoDB Atlas database service, along with the free community monitoring service, and Kubernetes integration.
