Odor Counteractant

**FORMULA**

#**110**  
**120**  
Contains Airicide®

## **RX 110 URINAL SCREENS & RX 120 TOILET RIM CAGES**

With AIRICIDE® Odor Counteractant + Enzymes

Banned in more and more areas because they contaminate ground water, "para" toilet bowl and urinal blocks have been difficult to replace. Until now, producers have merely placed non-para cakes in old fashioned screens and holders – it hasn't worked. The non-para cakes dissolved too quickly and their deodorizer content was going down the drain instead of into the air.

cages house new, reformulated, longer lasting blocks with more AIRICIDE® true odor counteractant plus enzymes. Of equal importance are the cages or holders. They are aquadynamically designed especially for our unique non-para cakes, to channel less water across the cake and continuously release more odor counteractant into the air.

Now RX110 urinal screens and RX120 toilet rim

### **Description**

Both RX110 urinal screens and RX120 rim cages hold compressed cakes formulated with heavy duty surfactants and AIRICIDE® Odor Counteractant plus enzymes. Together the RX formula removes organic matter, mineral scale deposits, uric salts and odors... every time the fixture is flushed. Neither product contains "para" or other chlorinated solvents. They require no warning labels, are water soluble and completely biodegradable! RX110 Urinal Screens are designed specifically to eliminate the unpleasant task of removing cigarette butts, paper and trash from urinal traps and to prevent costly blockages that might otherwise occur. The flexible vinyl screen fits urinals of all types and shapes other than those holding freestanding water. RX120 Toilet Rim Cages are made to fit under the flush rim of any toilet. A specially designed baffle in the design directs water across the cake to provide uniform release of the AIRICIDE® and cleaners.

### **Uses**

RX110 URINAL SCREENS and RX120 TOILET RIM CAGES are made to automatically clean, descale and deodorize toilet fixtures, traps and plumbing lines.

**RX110 URINAL SCREEN INSTALLATION:** Place screen directly over drain hole in urinal to prevent any unwanted debris from blocking the drain.

**RX120 TOILET RIM CAGE INSTALLATION:** Clip the holder on the side of the toilet bowl so that the cage is snug under the flush ring.

# RX 110 URINAL SCREENS & RX 120 TOILET RIM CAGES

With AIRICIDE® Odor Counteractant + Enzymes

## Benefits

### RX110 FEATURES:

**BIODEGRADABLE:** Contains no paradichlorobenzene to interfere with sewage treatment or contaminate ground water.  
**CLEANS & DESCALES WITH EACH FLUSH:** Blocks contain heavy-duty surfactants and concentrated chelating agents that dissolve mineral deposits and uric salts. "Para" does not, and it can even clog drains.  
**CONTAINS AIRICIDE®:** AIRICIDE® changes the size and shape of odorous molecules in the air and erases (not just masks) foul odors.  
**NON-EVAPORATING:** The AIRX compound is consumed only by flushing water, whereas "Para" evaporates in the air whether the fixture is used or not.  
**HARD WATER:** Cake complex is heavily chelated to prevent buildup of scale that can harbor foul odors.  
**APPROXIMATELY 30 DAYS USAGE:** The highly compressed RX cakes dissolve slowly. Urinal screens last appx.1,500 flushes, rim cages appx.1,000 flushes.  
**OPEN TOP AQUADYNAMIC DESIGN:** For steady, long lasting release and effectiveness of AIRICIDE® Odor Counteractant.  
**RAISED BLOCKS:** Cakes in the screens are held above the water line in most fixtures to prevent dissolving between flushes.

### RX120 RIM CAGES FEATURES:

**CONTROLLED RELEASE:** Holds a small amount of water between flushes to dissolve and release just the right amount of complex with each flush.  
**UNIQUE DUMP VALVE:** Remains closed and holds back the liquified complex until the flush water goes down the drain, then releases it into the standing water.  
**NON-STREAKING:** The position of the valve releases the complex directly into the water in the bowl without touching the inside wall of the bowl as do old fashioned cages.  
**ODOR COUNTERACTANTS:** Blocks contain chelating agents to prevent build up of scale that can harbor odors. Also contains AIRICIDE® to erase odors in the air.

## Directions

RX110 URINAL SCREENS and RX120 TOILET RIM CAGES are made to automatically clean, descale and deodorize toilet fixtures, traps and plumbing lines.

**RX110 URINAL SCREEN INSTALLATION:** Place screen directly over drain hole in urinal to prevent any unwanted debris from blocking the drain.

**RX120 TOILET RIM CAGE INSTALLATION:** Clip the holder on the side of the toilet bowl so that the cage is snug under the flush ring.

## Specifications

COLOR OF CAKES.....Blue  
CLEANING INGREDIENTS.....Nonionic surfactants  
OTHER ADDITIVES .....Bioenzymatic additives  
ODOR COUNTERACTANTS.....AIRICIDE®  
PARADICHLOROBENZENE.....None  
STORAGE LIFE .....Minimum one year  
LIFE IN USE.....Approximately 30 days each  
TOXICITY .....Non-toxic per 29CFR p 1910. 1200  
HARD WATER TOLERANCE .....Excellent  
APPX. FLUSHES.....RX110 URINAL SCREEN - 1,500  
RX120 TOILET RIM CAGE - 1,000
