components TDataSet is the descendant. This represents an in-memory data storage that does not contain linked data files. Immediately after making Functionality functionality with TIBCSript component support for Download DBExpress Driver for Standard 1.0 Next article DBExpress is a database-independent layer that defines a common interface to provide faster access to SQL database servers. For each supported server, DBExpress DBExpress Delphi 6 Borland C++Builder 6 Borland Kylix 3 Borland Kylix 2 Following are the main features of our DBExpress drivers: direct data access capability capability to connect through native protocols without using client software It is possible to generate source code files (Pascal, Basic, C, C++ in languages) with constants. Autonomous source code file (in Pascal or C++ language). INI INI (*.ini). It can import resources from executed files and RES files. It is useful for localization of programs thanks to the inherent capabilities of automatic translation in different languages. Data editing (for example, images) is realized with the use of programs installed on the computer instead of using internal means. It is useful for localization of programs thanks to the inherent capabilities of automatic translation in different languages. The program is not able to edit resources directly (in executed files and RES files), but stored them in files in its own format. This program is useful for Borland Delphi and Borland C++ builder developers. Download Resure 1.18 in Softonic Softonic
