Welcome to the March 2016 edition of Rejoice: a monthly news and prayer focus on achieving the Sustainable Development Goals (SDGs) and The Salvation Army mission of ending poverty and bringing life transformation. Published by the International Headquarters (IHQ) in New York City, USA.

UP FOR JUSTICE

Prayer Focus:
Clean Water and Sanitation

Salvation and water are two basic components that enable survival and daily tasks. To maintain health and prosperity, water and sanitation are crucial. Both are necessary and interdependent.

It is easy to take both for granted. Because water and sanitation are taken for granted, is it possible to have global awareness?

In 2015, even without global awareness, we are 1.8 billion people globally without access to drinking water. The Water Scarcity affects 40% of the global population and is projected to rise.1

This is the testimony of God that all who believe in the Son through him do not perish but have eternal life.

(John 3:16)

In response to the world's lack of clean water and sanitation, events at the ISJC and San Francisco World Council of Churches (SF WCC) brought together a large assembly with the theme "Moving fromOPP to Justice." This month, Robert Docter shares:

In Scripture, water is likened to salvation and eternal life. When Jesus speaks to the woman at the well, it says: "If you knew the gift of God, you would have asked him, and he would have given you living water."

The question remains: how can water access and technology reach those in need? SDG 6 provides targets and initiatives for the world to follow.

The Salvation Army seeks to provide both types throughout the world. It also serves as a reminder of Salvation with Jesus is the same. It gives eternal life. SDG 6 reminds the world of the importance of accessible and sustainable water and sanitation for all people. It also serves as a reminder of the value of reducing water scarcity.

Prayer Focus:

Clean Water and Sanitation

Clean water is essential for survival, and access to clean water and sanitation is an important component of well-being. It is estimated that over two billion people do not have access to clean drinking water, and sanitation issues are a significant problem worldwide. The United Nations (UN) has set specific goals for clean water and sanitation, known as the Sustainable Development Goals (SDGs), which aim to provide targets and initiatives for the world to follow.

The SDGs include specific targets for clean water and sanitation, such as ensuring availability and sustainable management of freshwater resources, and improving access to safe and affordable sanitation services. The SDGs also call for the provision of safe and affordable drinking water for all, and basic sanitation for all. These goals are essential to improve the health and well-being of individuals and communities around the world.

The SDGs have been developed by the UN and are expected to be achieved by 2030. The goals aim to end poverty, protect the planet, and ensure prosperity for all. They are built on a foundation of 17 interconnected goals and over 169 targets, all of which are crucial for achieving a sustainable future.
