Electronics Manufacturer Streamlines Voluntary Battery Recall Process Using Call2Recycle’s Customized Solutions

**THE CHALLENGE**

An international electronics manufacturer identified a performance issue impacting batteries that power tablets. Discovering these issues and concern for a potential safety risk to customers led the company to pursue a voluntary battery recall on the impacted products. They not only had to deliver a replacement to customers in a quick and efficient manner, they also had to ensure that the defective batteries were returned for recycling safely and responsibly.

Acting in a timely and compliant manner, the manufacturer quickly assessed their internal capabilities, including personnel and situational experience. They concluded that based on the scope of the recall and their customer-centric focus, they needed to engage a trusted partner with experience managing recalled or defective batteries.

**THE SOLUTION**

This manufacturer turned to Call2Recycle, a reputable national battery stewardship program, to partner and guide them in managing their voluntary battery recall in a compliant, safe and customer-centric manner.

Call2Recycle customized a turnkey product return and replacement program that incorporated special permitted shipping containers, integrated with the manufacturer’s service center and provided detailed reporting for returns analysis. Call2Recycle’s customized recall solution was quickly implemented, with customers receiving return containers within days of the final plan being approved by the manufacturer. With Call2Recycle managing the return solution, the manufacturer was able to focus on communicating with their customer to ensure their relationship and brand remained unharmed.

**RESULTS:**

- Over 92,000 affected products successfully recycled.
- Positive customer feedback for proactive, safety-centric approach.
CASE STUDY

Electronics Manufacturer Streamlines Voluntary Battery Recall Process Using Call2Recycle’s Customized Solutions

Key Solution Attributes:

- Integrated into the manufacturer’s service center to fulfill their customer’s requests for replacements.
- Developed co-branded, customized instructions for the manufacturers customers on how to properly pack and ship the affected products.
- Distributed U.S. DOT-approved return kits, including packing instructions, labeling, and return shipping labels, to customers to ensure safe handling and shipping of the recalled battery.
- Ensured affected products were properly managed and recycled by one of Call2Recycle’s vetted downstream recycling partners.
- Provided weekly data, including the return date, unique customer identifier, number and weight of the products returned.

“The Results

With the assistance of Call2Recycle, the manufacturer was able to successfully navigate the complexities of the recall process and exceeded their goal of successfully returning over 92,000 affected products within 12 months’ time. Although the manufacturer hopes another recall is not in their future, should they be faced with a similar scenario, their first call will be to Call2Recycle.

“Call2Recycle’s project management team leveraged their industry knowledge to swiftly assess our situation and provide a timely and compliant solution. They alleviated our concerns and seamlessly aligned with our team to help us achieve target goals.”
