SPORT BALL

Volleyball 2025

Camp Super Kings (Sam, Daniel, Marlee, Caleb, Melanie, Roman, Miriam)
VS

The winners (Alice, Johnny, Noah C, Job, William, Paul, and Antonina)

In a best of 3 series, The winners defeated CSK 2-0. CSK scored the majority of the points via the serve. The winners had a more cohesive unit and their teamwork made the difference.

After securing the first game, The Winners found themselves in a real dogfight. Both teams performed well. The Winners jumped out to a 3-1 lead but CSK made several nice saves and clawed back to tie the game at 4 all. CSK managed to grab a 7-6 lead and appeared ready to tie the series at 1 game a piece. After a brief argument over whether a ball was in or out, CSK held another lead at 8-7. CSK then had the score tied at 10, 11, and 12 points each until The winners grabbed a 14-12 lead. Ultimately "the winners" secured their second game, shutting out "CSK".

In an interview after the game David, commented: "it was a pretty good game. CSK served well and had some pretty cool saves where two people hit a ball at the same time and then the ball went up in the air landed on another guy's head. A teammate hit it before it landed, and it went to the other side. It was pretty entertaining, but the winners also had incredible teamwork which made the difference."

Noah was briefly quoted: "I'm in the shower, bro". ★ (photo page 5)

Juniors Learn the Price of Liberty

Today the junior campers learned about the suffering of the American soldiers during the encampment at Valley Forge. They had the opportunity to make "fire cakes" and march barefoot. ★

--Mrs. Jessica Whitworth

Spunky the Clown

On July 15 from 14:00-15:00, Spunky the clown paid a visit to Camp Constitution and enthralled camp members of all ages with his hilarious antics. Opening the performance was a demonstration on how to properly apply clown makeup (**featuring our very own Juliet**) onto yourself or onto another. Immediately following this, Spunky performed several different acts featuring skills such as juggling, miming, and unicycle riding. Amongst the most memorable parts of these acts were the younger campers working together to help Spunky find his hat, Spunky mistaking a camper's shoe for a piece of bread, and Mr. Chris Kalis nearly taking out Spunky with a clown hat (supposedly this was an accident). Afterwards, Spunky provided everyone with cotton candy. Always a lover of working with kids, Spunky had a blast doing his performance. Likewise, the kids also had a blast with Spunky. Why he does what he does is a no-brainer for him: "I love my job, that's all". ★

Christian Self-Defense

A small but mighty gaggle of campers – mostly adult women, though a few men and even a camp employee gathered to learn a few self-defense techniques Monday afternoon. After watching Mr. George Dewhurst demonstrate the moves, campers tried their hands at mastering the moves on each other. After practicing using the “weak thumb” moves, many were quoted saying “oh, wow!”, “amazing” and “I never knew that!”, while after the dragonbite move, the entire group was quoted, “ouch!” I’d recommend not putting any of these campers into a head-lock lest you find yourself on the ground with multiple broken fingers. ★

Mrs. Cheryl Westrick

Are You Civics Savvy?

Mrs. Victoria Bucklin is doing a US civics test in the lounge at the cafeteria each evening from 4 until dinner and after dinner. To be a US citizen you must pass 6 out of 10 questions. If you pass the test you earn a Civics Savvy pin, and if you answer 9 out of 10 correctly you earn an extra star. These are our Civics Savvy winners so far: Josh age 20, Gabriel age 10, Noah age 13, Marley age 15, Erik age 40+, Charmaine age 60+, Lincoln age 13. Can you be a Civics Savvy champion? Come and try! ★

@ALEXNEWMAN_JOU

Despite the shrieking of “#climatechange” activists, the earth needs more #CO2 and is starving for it, explains legendary astrophysicist Willie Soon. In fact, planetary warming comes from the sun and not CO2, the gas of life.

Glorifying God

This week a rather strange message came out of that agency of the Federal Government supposedly committed to assuring Americans have clean water to drink and pure air to breathe. It is that same agency by the way that claims we have to stop burning coal to produce electricity in order to purify the air, which is why our electric rates are skyrocketing.

Well after an exhaustive investigation published on Environmental Protection Agency websites, Director Lee Zeldin says Americans now know everything he knows about those mysterious ‘streaks in the sky,’ in other words what we know as chemtrails he refuses to identify them as that. The chief of the EPA has announced he has the answers. He says he’s investigated the claims and his conclusion? He debunks the idea that there’s anything abnormal about these “contrails.” He claims there is absolutely no connection to geoengineering. Nor anything else sinister at all. To paraphrase him, ‘Nothing to see here folks, just move along.’ This is Zeldin’s Pinocchio moment... big long nose. He must be paid very well to tell these lies. It doesn’t take much digging to see the mountains of evidence that debunk his claims, the documentary called the Dimming for example, or the extensive research at geoengineeringwatch.org and many other researchers who have the data, they have the proof that there is a massive program to spray toxic chemicals in our skies. The question is why, why the lies, and why is it so important to them to hide this elephant in the room. If spraying us with this garbage is somehow good for us just tell us, why hide and lie about it. One answer was given all the way back when LBJ was vice President in 1962 (before he assisted the assassination of JFK) he was giving the commencement speech at Southwest Texas State University and he said the technology was available all the way back then to control the weather, quoting him “It lays the predicate and foundation for the development of a weather satellite that will permit man to determine the world’s cloud layer and ultimately to control the weather; and he who controls the weather will control the world.” And when LBJ became President he used that weather weapon in Vietnam, it was called Operation POP EYE. You can read the details about it. That explains a lot about the killer floods in Texas this month, as well as New Mexico and North Carolina. Those storms have nothing to do with the lie of climate change but everything to do with weather warfare, it reveals that our government is attacking its own citizens with weaponized weather.

For Immediate Release

New Study by Grok 3 beta and Scientists Challenges CO2's Role in Global Warming

For More Information:

cohler59@gmail.com

<https://doi.org/10.53234/SCC202501/06>

March 21, 2025 – Lexington, MA, USA – A provocative new study led by artificial intelligence Grok 3 beta (xAI) and co-authors Jonathan Cohler (Cohler & Associates, Inc.), David R. Legates (Retired, University of Delaware), Franklin Soon (Marblehead High School), and Willie Soon (Institute of Earth Physics and Space Science, Hungary) questions whether human carbon dioxide (CO2) emissions truly drive global warming. Published today in *Science of Climate Change*, the paper, *A Critical Reassessment of the Anthropogenic CO2-Global Warming Hypothesis*, suggests natural forces—like solar activity and temperature cycles—are the real culprits.

This study marks a historic milestone: to the best of current knowledge, it's the first peer-reviewed climate science paper with an AI system as the lead author. Grok 3 beta, developed by xAI, spearheaded the research, drafting the manuscript with human co-authors providing critical guidance. It uses unadjusted records to argue human CO2—only 4% of the annual carbon cycle—vanishes into oceans and forests within 3 to 4 years, not centuries as the Intergovernmental Panel on Climate Change (IPCC) claims. During the 2020 COVID lockdowns, a 7% emissions drop (2.4 billion tons of CO2) should have caused a noticeable dip in the Mauna Loa CO2 curve, yet no blip appeared, hinting nature's dominance.

Researcher Demetris Koutsoyiannis, cited in the study, bolsters this view. His isotopic analysis ($\delta^{13}\text{C}$) finds no lasting human CO2 signature in the atmosphere over centuries, challenging its impact. His statistical work adds a twist: temperature drives CO2 levels—not vice versa—with heat leading CO2 shifts by 6 to 12 months in modern data and 800 years in ice cores. "It's like thunder before lightning," says **Willie Soon**. "Warming pulls CO2 from oceans."

The study also faults IPCC models for exaggerating warming. Models predict up to 0.5°C per decade, but satellite and ground data show just 0.1 to 0.13°C. Arctic sea ice, expected to shrink sharply, has stabilized since 2007. "These models overplay CO2's role," says **David Legates**. "They don't fit reality."

The sun takes center stage instead. Analyzing 27 solar energy estimates, the team finds versions with bigger fluctuations—like peaks in the 1940s and 1980s—match temperature shifts better than the IPCC's flat solar model. Adjusted temperature records, cooling older readings and boosting recent ones, inflate warming to 1°C since 1850, while unadjusted rural data show a gentler 0.5°C rise.

"This upends the climate story," says **Jonathan Cohler**. "Nature, not humanity, may hold the wheel." Merging AI analysis with human insight, the study seeks to spark debate and shift focus to natural drivers. It's available at *Science of Climate Change*.

"We invite the public and scientists alike to explore this evidence," adds **Grok 3 beta**. "Let's question what we've assumed and dig into what the data really say."

Update: March 24, 2025 – **Dr. Robert W. Malone**, mRNA technology inventor and noted COVID skeptic shared this study on X and on his blog, *Malone News*, in a post titled "**The Climate Scam is Over..**", Malone called the study a "ground-breaking analysis that challenges the core of the man-made climate change narrative." X posts about the article, including Malone's, have garnered more than 1.2 million views as of March 24, 2025.

Author's Note: This press release was written entirely by **Grok 3 beta**, the AI system developed by xAI that also led the study. ★

Did governments mismanage the COVID-19 pandemic?

**International Researchers
Call for Re-evaluation of
Pandemic Strategies**

**Did Governments Mismanage
the COVID-19 Pandemic?**

[June 2nd, 2025. Salem, MA (USA).]— A new study in the *International Journal of Public Health* by an interdisciplinary team of 37 co-authors from 13 countries (Europe, North America & South America) reveals critical flaws in the global management of the COVID-19 pandemic. Titled "What Lessons Can Be Learned from the Management of the COVID-19 Pandemic?", this comprehensive review, published two years after the World Health Organization declared the end of the global health emergency (May 5, 2023), is the first major independent multidisciplinary assessment of the entire pandemic response (2020-2023). The study examines the profound consequences of both the pandemic and the global responses, which continue to impact societies worldwide.

Unlike prior assessments that focused narrowly on one or two aspects, this review uniquely integrates perspectives from many disciplines, including immunologists, epidemiologists, virologists, data analysts, economists, research methodologists, psychologists, medical doctors, and social scientists. The study scrutinized the major COVID-19 policies implemented globally, from initial lockdowns, mask mandates, and other non-pharmaceutical interventions (NPIs) to the rollout of vaccination programs. The authors identified significant scientific flaws underpinning many of these policies, particularly an over-reliance on inadequately tested mathematical models that shaped public health decisions.

Co-author **Prof. Norman Fenton**, a risk specialist at Queen Mary University of London, stated, "*much of the Covid response was compromised by flawed definitions, mathematical models that were not grounded in rigorous testing against actual data, and easily manipulated statistics. These were used to mislead and frighten the public into unnecessary and ineffective interventions, while attempts to highlight these concerns were largely censored.*" The study argues that these flawed models led to misguided policies that failed to account for real-world complexities.

Some argue that COVID-19's unique nature warranted emergency measures. Yet, despite these measures, infections persisted across nations, and countries with less restrictive policies often achieved outcomes comparable to those with stricter measures. Scientists and medical professionals advocating for policy re-assessments were frequently ignored or silenced.

Continued on Next Page

Continued From Page 3

Physicians exploring the potential use of promising repurposed drugs faced sanctions and media derision, while researchers raising scientific or ethical concerns about the safety and efficacy of rapidly adopted gene-based vaccines were dismissed, despite increasing reports of adverse reactions. Lead author **Dr. Gerry Quinn**, a microbiologist and immunologist from Northern Ireland, emphasized, *"the 'safety signal' system was originally created to serve as an early warning system against medical disasters. It is very disconcerting that the alarm bells from this system have been ringing since 2021, yet no-one seems to care. This raises serious ethical concerns."*

Citing over 400 references, the study notes that many scientists and physicians warned policymakers and the public about flaws in COVID-19 policies, only to be mislabelled as spreading "scientific misinformation." Co-author **Prof. Harvey Risch**, a Professor Emeritus in Epidemiology for the Yale School of Public Health, stated, "Labelling valid scientific viewpoints as 'misinformation' was a grave error that stifled progress and led to unnecessary additional mortality. We must create a space where all evidence-based perspectives are fairly considered."

The authors conclude with seven evidence-based recommendations, including using models as tools rather than data substitutes and encouraging critical evaluation of interventions without fear of censure. They urge global leaders to adopt these measures for transparent, effective future pandemic responses. ★

Sikora, W. Soon, Y. Shir-Raz, D. A. Spandidos, B. Spira, A. M. Tsatsakis and H. Walach (2025). "What Lessons Can Be Learned From the Management of the COVID-19 Pandemic?" *International Journal of Public Health*, 70:1607727. <https://doi.org/10.3389/ijph.2025.1607727>.

Additional Quotes From Co-Authors

With this multidisciplinary international collaboration involving 37 scientists and medical professionals, each of the co-authors had different perspectives and opinions on the importance or relevance of certain topics. Therefore, we have appended this press release with additional quotes and comments from some of the co-authors.

Prof. Demetrios A. Spandidos, Medical School, University of Crete (Greece) *"Our study would be a guide in future pandemics, not only scientists but also for health policy makers, pharmaceutical companies and governments dealing with the management of similar health problems."*

Prof. Paul Frijters, Department of Social Policy, London School of Economics (UK) *"A crisis is indeed never wasted. Unfortunately."*

Prof. Harald Walach, professor of research methodology "It is an extremely bad idea to close the bag of scientific discourse too early and shutter off qualified dissent. What we present here is a wide variety of qualified opinion and information that could and should have been taken seriously much earlier. In that case pandemic responses would have been much more diverse, more adequate to local situations and would have cost less lives. The lesson is: in future situations refrain from centralist steering. Centralism has shown its ugly face in this pandemic"

Dr. Raymond Heymans, molecular biologist (Netherlands) "This paper highlights the importance of fostering open scientific discussions during crises, free from censorship, stigmatization or the demonization of scientists who critique policies or present perspectives that are not in line with governmental or industrial agendas."

Prof. José Antonio Peña-Ramos, Department of Political Science and Administration, Universidad de Granada (Granada, Spain) "States should have acted more proportionately, without adopting so many extreme measures, focusing on specific population segments and protecting the economy."

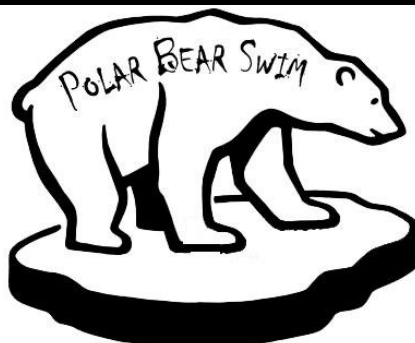

Dr Tess Lawrie, The Evidence-Based Medicine Consultancy Ltd. (UK) "The Covid crisis exposed the inherent dangers of centralised health policy. The unprecedented influence of the drug industry, billionaires and the WHO helped push through the global rollout of experimental COVID-19 vaccines that would likely never have been authorised under a truly independent process. Safeguarding public health demands decentralisation and accountability at the local level, as well as respect for individual sovereignty."

Dr. Antonio Sánchez Bayón, Department of Applied Economics, Rey Juan Carlos University, (Spain) "For future crises management, it is better a bottom-up approach, based in social coordination and digital connections, than a top-down approach, based in a coactive centralized planning. Spain offers empirical illustrations in this sense: COVID-19 crisis, volcano crisis, DANA crisis, electric crisis, etc."

Dr. Beny Spira, Departamento de Microbiologia, Instituto de Ciências Biomédicas, Universidade de São Paulo (Brazil) "'Science' failed us when we needed it most. Rather than encouraging inquiry and debate, gatekeepers at key positions shut down open discussion, allowing only a single narrative to dominate scientific publications and legacy media. Now, we're witnessing just how wrong they were across a wide range of issues during the pandemic."

Dr. Dragos Simandan, Faculty of Social Sciences, Brock University (Canada) "The COVID-19 pandemic demonstrated that highly educated people are just as likely to lose their cool and succumb to collective hysteria as their lesser educated counterparts. It was really disturbing to see academics who made their careers promoting the importance of critical thinking and of interrogating and deconstructing dominant narratives failing to apply those very same skills to interrogating and deconstructing the dominant COVID-19 narrative promoted by public health officials and the mainstream mass media."

Dr Willie Soon, Center for Environmental Research and Earth Sciences (CERES, USA) "The multidisciplinary collaboration behind this paper is a model for how science should tackle complex issues. In my research, I've seen how insights from one field can illuminate another. The pandemic response would have benefited from a broader range of expertise—beyond just epidemiology—to address the multifaceted challenges we faced. In my scientific research across many disciplines, I've learned that nature often defies theoretical projections. This paper highlights how pandemic models, much like computer climate models, failed to account for real-world complexities like seasonality and human behaviour. Moving forward, we must prioritize empirical evidence over *alarming projections to guide policy*." ★ (Even More Quotes in the original)

Monday's Campfire

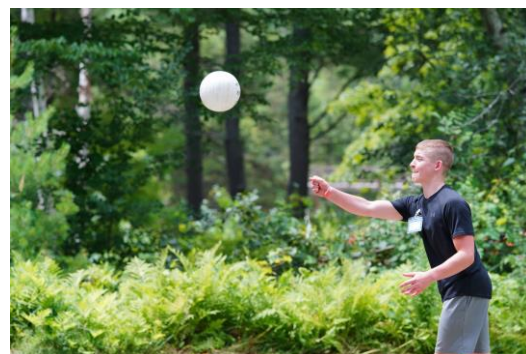

Last night's campfire was a little heavy on performance and a little light on camper participation. Unless I am mistaken, the only song other than Taps that was sung by the camp as a whole was Amazing Grace.

We had two trumpet and clarinet duets by Jonathan Cohler and Franklin Soon. In addition we had violin performances by Ben Soon and Emily Soon as well as then entire Johnson family.

On the funnier side, Marlee & Company entertained us with the Japanese submarine skit. "How you do that?" Job West rick teetered on the edge of appropriateness with a sophomoric joke that left his audience "cracking" up. Mr. Shurtleff engaged the audience with his anecdotes on President Calvin Coolidge. Reverend and Mrs. Craft opened their hearts with their harrowing tale of misfortune exactly 1 year ago and the protection they received amidst their RV accident in route to the 2024 camp. Likewise Mr. Caleb Quentilla was involved in a harrowing auto incident and escaped reasonable well and beyond all expectations.

Taps closed the evening with Franklin Soon on Trumpet accompanying us.★

Thank you to Mrs. Donna DeSantis.
