

# Lesson Five Review

- Inference Questions: “Must be true” correct answers are 100% true, “Most Strongly Supported” correct answers are the best choice among the five.
- “Some” = “at least one”
- “Most” = “50% plus one”
- To combine a “some” or “most” statement with a sufficient/necessary statement, a part of the “some” or “most” statement must be the sufficient condition of the sufficient/necessary statement

# Lesson Five Review

- You can combine two “most” statements if the first part in each “most” statement is the same:
- Most A are B  
Most A are C

---

B Some C

# Lesson Five Review

- **Must Be False Questions:** the correct answer must violate what must be true.
- **Disagreement Questions:** one speaker must agree with the correct answer, and the other speaker must disagree with it. One will say “Yes”, the other will say “No.”

# Lesson Five Review

- All the question types we have done thus far are “Passive” questions: the correct answer cannot do anything new to the stimulus, or have language that is stronger than that in the stimulus.
- Must Be False and Disagreement questions need to contradict the stimulus, and the language must be strong enough to violate the stimulus, so they are not, strictly speaking, “passive” questions. But they are close, because we must know precisely what the passage implies before we can choose an answer that contradicts the passage.
