Dental Care During Pregnancy is Safe and Important
A healthy mouth for mother, a healthy start for baby

Coach women during pregnancy about how the condition of their teeth and mouth can impact their children’s risk for tooth decay

Untreated gum disease in pregnant women can harm their systemic health and may be linked to low birth weight/preterm births

Mothers can unintentionally pass cavity-causing bacteria to newborns, increasing children’s risk for tooth decay

Children are more than 3x as likely to have tooth decay if their mothers have high levels of untreated tooth decay

4 Ways Pregnant Women Can Give Their Newborns a Healthy Start

Make and keep regular dental appointments

Brush with fluoride toothpaste at least 2x daily

Drink fluoridated tap water every day

Talk to a dentist or doctor about ways to prevent or manage dental problems
