### FISSURE SEALANTS

**What is a fissure sealant?** Fissure sealants are a plastic coating applied to children's back teeth and are a safe and painless way of protecting your children's back teeth from tooth decay. Most tooth decay in children occurs in their back teeth.

**How are fissure sealants applied?** It is quick and straight forward, taking only a few minutes per tooth. Our Dentist will clean and prepare the tooth with a special solution. The tooth is dried with air. The liquid is then applied and set hard using a special light. It is pain free.

**How long do they last?** They can last for many years and the dentist may check them at each check-up. They can wear over time and your Dentist may add or replace some sealant
