

WOOD ROLLING PIN USE & CARE INSTRUCTIONS

Our rolling pins are crafted from North American solid hardwoods. Crafted from solid hardwood our rolling pins are created to be equally a functional piece for your kitchen or a work of art to be used in any room of your home. Even with the careful work of our craftsmen and the use of premium materials, proper care and cleaning is required. To properly care for your Amana wood rolling pin please observe the following instructions. Failure to do so will shorten the life of your new rolling pin substantially.

1. Clean your rolling pin by wiping with a damp sponge or towel and a mild detergent. Dry it completely and place it in a way to allow air movement completely around the pin.
2. DO NOT saturate your pin with water, allow it to sit on a wet surface, sit/soak in standing water, or place it in the dishwasher. Excessive moisture will cause the surface to become rough, cause cracking/warping, and will lead to glue joint failure.
3. Periodically treat your rolling pin with Emmett's Elixir Wood Conditioner or mineral oil as it begins to look dull or dry. Do not use other oils (vegetable, olive, etc.) on your rolling pin as they will build up and turn rancid. Failure to periodically treat your rolling pin will cause the surface to become rough and can cause cracking and glue joint failure.

With proper care your wood rolling pin will provide many years of use and enjoyment. Over time every pin will show signs of use and this is perfectly normal. If you would like to restore the surface of your rolling pin you may lightly sand the surface, clean it well, and treat it with Emmett's Elixir Wood Conditioner or other food safe treatment.
