

Mitsubishi Pajero Sport

## This ANCAP safety rating applies to:

Make / Model	Mitsubishi Pajero Sport
Year Range	October 2015 - December 2022
Variant(s)*	All variants
Vehicle Type	Large SUV

The Mitsubishi Pajero Sport was first released in Australia and New Zealand in December 2015. The Pajero Sport was upgraded in January 2020 (MY20). This ANCAP safety rating is based on ANCAP tests conducted in 2015 on the Mitsubishi Triton utility - on which the Pajero Sport is based - and applies to all Pajero Sport variants. Corresponding safety specification information is listed on page 2.

Dual frontal, side chest, driver knee and side head airbags (curtains) are standard. Electronic Brake Distribution (EBD) and Emergency Brake Assist (EBA), are also standard. Autonomous emergency braking (AEB) with pedestrian detection is available as standard from MY18 onwards.

## Injury Outcomes.

### Frontal Offset

### Side Impact & Pole#

### Whiplash Protection

# Head protection only.

## Test Results Summary.

Airbags	Dual Frontal, Side, Head, Driver knee
Frontal Offset Test	15.22 (out of 16)
Side Impact Test	16.00 (out of 16)
Pole Test	2 (out of 2)
Whiplash Protection	Good
Pedestrian Protection	Acceptable
ESC	Standard
Seat Belt Reminders	3.0 (out of 3)
Overall Score	36.22 (out of 37)
ANCAP Safety Rating	★★★★★
Rating Year^	2015

## Occupant Protection.

### Frontal Offset Test

Each body region is scored out of 4 points

Head / neck:	4.00 points
Chest:	3.97 points
Upper legs:	4.00 points
Lower legs:	3.24 points

The passenger compartment held its shape well in the offset test, although there was some deformation of the rear floorpan behind the driver. Pedal and steering wheel displacements were well controlled. Driver and passenger contact with the airbags was stable. All doors remained closed during the crash. High manual effort was needed to open the driver door after the crash.

### Side Impact Test

Each body region is scored out of 4 points

Head:	4.00 points
Chest:	4.00 points
Abdomen:	4.00 points
Pelvis:	4.00 points

The side impact test normally used by ANCAP simulates a small car striking the driver's door of the test vehicle. Experience shows that large vehicles like the Pajero Sport can be expected to perform well in this test. ANCAP has adopted a policy of awarding these types of vehicles a default score of 16 points (out of 16).

### Pole Test

Scored out of 2 points

Score:	2.00 points
--------	-------------

The vehicle was eligible for a side pole test because it has side curtain airbags. The vehicle scored the maximum 2 points for head protection in this test.

### Whiplash Protection Test

Whiplash protection is assessed to the RCAR Protocol

Geometric test:	Good
Dynamic test:	Good
Overall whiplash rating:	Good

Based on IIHS tests.

## Pedestrian Protection.

### Pedestrian Test

Scored out of 36 points

Adult & child head impacts: 14.16 points

Upper leg impacts: 0.86 points

Lower leg impacts: 6.00 points

This rating is based on ANCAP tests of the Triton, which scored 21.02 out of 36 points (Acceptable). Good results were obtained in the central area of the bonnet and across the bumper. Some points were gained in the centre of the bonnet leading edge but the outer edges were poor. (v5.3)

### Child and adult head impact

### Adult leg impact (upper and full legforms)

## Score Deductions.

### Deductions from frontal offset test scores

Head / neck: No deductions  
Chest: No deductions  
Upper legs: No deductions  
Lower legs: No deductions

### Deductions from side impact test score

Chest: High-seat vehicle: default side impact score awarded.

### Deductions from pole test score

Head: No deductions.

## Safety Features & Technologies.

Descriptions of each of these safety features and safety assist technologies (SAT) and detail on fitting requirements for each star rating level can be found at [ancap.com.au](http://ancap.com.au).

\* Steering column and pedal movements are measured relative to the driver's seat.

\* ANCAP safety ratings do not automatically extend to variants that have different body styles, engine configurations, driven wheels or occupant restraint systems (e.g. fewer airbags). In these cases, ANCAP considers technical evidence submitted by manufacturers before deciding on extending a rating to additional variants of a model. For further information about the application of ANCAP safety ratings to model variants, see the ANCAP Variant Policy.

^ The Rating Year denotes the year requirements against which a vehicle has been assessed. The Rating Year is determined by ANCAP and may be based on the year in which a new vehicle model is first launched into the Australian and/or New Zealand markets; the year in which the vehicle was tested (if tested by Euro NCAP); or, for vehicles which hold an existing ANCAP safety rating, the year in which the rating was updated (or earlier applicable year).
