Variant: GE 5 door Eng: 1.3

Kerb weight: 995 kg Category: LIGHT CAR Vehicles built: 2007 Tested by Euro NCAP

**Important note**: The *left-hand-drive* European model with 1.3 litre engine was tested by Euro NCAP. Australasian specifications may vary and therefore models sold in Australasia might provide different levels of protection to those described on this page.

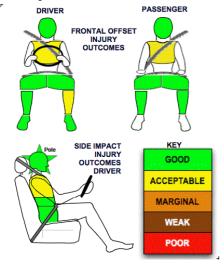

### **Model History and Safety Features**

The tested model of Mazda2 was introduced in Australia at the end of 2007. Dual front airbags and antilock brakes (ABS) with electronic brake distribution (EBD) are standard. Side airbags and head-protecting side curtains are standard on the Genki variant and optional on others in Australia. Side airbags and curtains are standard in New Zealand. Electronic stability control (ESC) became standard on Australian variants from May 2010. ESC was available on some variants prior to then. Intelligent seat belt reminders are fitted to both front seats.

Pretensioners are fitted to the front seat belts to reduce slack in the event of a crash. A three point seat belt is fitted to the centre rear seat. This provides better protection than a two point (lap) seat belt.

## **OCCUPANT PROTECTION: 5 Stars**

The Mazda2 scored 15.55 out of 16 in the offset crash test. The passenger compartment held its shape well. There was a slight risk of serious chest and leg injury for the driver. The vehicle scored 14.78 out of 16 in the side impact crash test. There was a slight risk of serious chest and abdomen injury for the driver. A further two points were earned in the optional pole test. This ANCAP 5-star rating applies to all hatch and sedan variants fitted with ESC and 6 airbags.

Offset crash test at 64km/h

## FRONTAL OFFSET CRASH TEST (v4.1)

Body region scores out of 4 points each: Head/neck 4 pts, chest 3.59 pts, upper legs 4 pts, lower legs 3.96 pts.

The passenger compartment held its shape well in the offset crash test. The brake pedal moved rearwards by 45 mm and upwards 17 mm. The steering wheel hub moved 4mm forward, 26 mm upward and 10 mm sideways. The front ("A") pillar moved 4 mm rearwards. All doors remained closed during the crash.

The airbag cushioned the head of the driver and contact was stable. There were no knee hazards. The passenger's head was cushioned by the airbag.

### SIDE IMPACT CRASH TEST (v4.1)

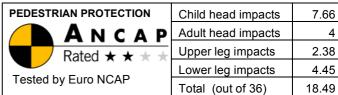

Body region scores out of 4 points each: Head 4 pts, chest 3.78 pts, abdomen 4 pts, pelvis 4 pts.

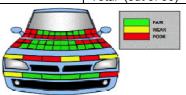

A rear door opened during the crash.

The vehicle was eligible for an optional pole impact test, since it had head-protecting side airbags and scored four points for the head in the side impact test. The manufacturer decided to go ahead with the pole test and the vehicle earned a further two points.

## PEDESTRIAN PROTECTION RATING (v4.1)

The bumper was rated as predominantly fair for its protection of pedestrians' legs. The part of the bonnet surface likely to be struck by adults' heads was rated as predominantly poor.
