ANCAP SAFETY

TESTED 2025 ★★★★★

The Kia Tasman was introduced in Australia in June 2025 and New Zealand in July 2025. This ANCAP safety rating applies to all dual cab variants excluding X-Line & X-Pro. X-Line & X-Pro variants are unrated.

Additional technical information was provided to ANCAP for 4x2 and cab-chassis variants, confirming that comparable performance to the tested vehicles would be expected.

Dual frontal, side chest-protecting and side head-protecting airbags are standard. A centre airbag which provides added protection to front seat occupants in side impact crashes is also standard.

Autonomous emergency braking (Car-to-Car, Vulnerable Road User, Junction & Crossing and Head-On), as well as a lane support system with lane keep assist (LKA), lane departure warning (LDW) and emergency lane keeping (ELK), and an advanced speed assistance system (SAS), are standard on all variants.

SAFETY NOTE

Installation of child restraints in the second row centre seating position is not recommended as there is no top tether anchorage.

FAR SIDE IMPACT
4.00 points out of 4

Scaled scores. Total test scored out of 16.00 points.

The passenger compartment of the Kia Tasman remained stable in the **frontal offset (MPDB)** test. Structures in the dashboard were a potential source of injury for the driver and passenger, and protection of the upper legs was rated MARGINAL. Dummy readings for the driver and front passenger showed GOOD protection for all other critical body regions.

The front structure of the Kia Tasman presented a moderate risk to occupants of an oncoming vehicle in the MPDB test (which evaluates vehicle-to-vehicle compatibility), and a 2.46 point penalty (out of 8.00 points) was applied.

In the **full width frontal** test, protection of the driver dummy was GOOD for all body regions except the pelvis (upper legs). The upper leg score was POOR with dummy readings indicating the driver's pelvis slipped beneath the lap section of the seatbelt and the dummy was not properly restrained during the crash. Protection of the rear passenger neck was ADEQUATE, and protection of the chest was MARGINAL. GOOD protection was recorded for remaining body regions.

In the **side impact** test, protection offered to all critical body regions of the driver was GOOD and full points were scored.

In the more severe **oblique pole** test, protection for the head and pelvis of the driver was GOOD, however chest protection was WEAK.

The Kia Tasman is equipped with a centre airbag to protect against occupant-to-occupant interaction in side impacts and it provided GOOD protection for the head of both front seat occupants. Prevention of excursion (movement towards the other side of the vehicle) in the **far side impact** tests was assessed as GOOD for both the vehicle-to-vehicle and vehicle-to-pole impact scenarios.

A Rescue Sheet, providing information for first responders in the event of a crash is available, and a multi-collision braking system is fitted. It was demonstrated that, if the car entered water, the doors and windows of the Kia Tasman would remain functional for the minimum required time period.

ON-BOARD SAFETY FEATURES
7.00 points out of 13

In the **frontal offset** and **side impact** tests, protection of the 10 year and 6 year dummies was GOOD and the Kia Tasman scored maximum points in these tests.

The Kia Tasman is fitted with lower ISOFix anchorages and top tether anchorages on the rear outboard seats. A child presence detection (CPD) system is not available.

Installation of typical child restraints available in Australia and New Zealand showed most child restraints could be accommodated in most rear outboard seating positions, though neither booster seat could be correctly installed in the rear outboard seating positions.

Installation of child restraints in the second row centre seating position is not recommended as there is no top tether anchorage.

GOOD ADEQUATE MARGINAL WEAK POOR NOT TESTED

NOTE: The child restraints fitted to vehicles tested by Euro NCAP are relevant to the European market. For Australasian consumers, this information should be used as a guide to vehicle features only. The Child Restraint Evaluation Program (CREP) provides an independent assessment on the safety of Australasian child restraints - see www.childcarseats.com.au.
* Installation of each child restraint is assessed separately in each position. Installation of multiple restraints has not been assessed and may not be possible.
^ The list of child restraints has been selected to provide a general indication of the rated vehicle's ability to accommodate various CRS types. ANCAP does not endorse or recommend any one CRS brand or model, nor does it rate the safety of child restraints.

Vulnerable Road User Protection

74%

46.82 out of 63

HEAD PROTECTION (Adult, Child, Cyclist) **9.14 points** out of 18	KNEE & TIBIA PROTECTION **7.58 points** out of 9	AEB CYCLIST **7.05 points** out of 9
PELVIS PROTECTION **4.34 points** out of 4.5	AEB PEDESTRIAN (Forward) **5.21 points** out of 7	AEB MOTORCYCLE **6.00 points** out of 6
FEMUR PROTECTION **4.50 points** out of 4.5	AEB PEDESTRIAN (Backover) **0.00 points** out of 2	LSS MOTORCYCLE **3.00 points** out of 3

In **pedestrian impact** tests, the bonnet and windscreen of the Kia Tasman provided GOOD to MARGINAL protection to the head of a struck pedestrian over most of its surface, with WEAK and POOR results recorded on the stiff windscreen pillars, the base of the windscreen and all edges of the bonnet surface.

Protection of the pelvis ranged from ADEQUATE to GOOD. Protection of the femurs was GOOD. Protection of the lower legs varied from MARGINAL to GOOD.

The autonomous emergency braking (AEB) system is capable of detecting and reacting to vulnerable road users such as pedestrians, cyclists and motorcyclists.

Testing of this system showed GOOD performance in forward **AEB Pedestrian** test scenarios, with collisions avoided or mitigated in most tests, including turning scenarios.

AEB Backover is not fitted to the variants covered by this rating therefore tests of this function were not conducted or scored.

GOOD performance was seen in **AEB Cyclist** test scenarios with collisions avoided or mitigated at most test speeds including in turning scenarios. The Kia Tasman provides information and warning when a bicycle is approaching from behind (**cyclist anti-dooring**).

GOOD performance was seen in the **AEB** and **LSS Motorcyclist** tests, including in turning and emergency lane keeping scenarios, earning full points.

The Kia Tasman is fitted with an autonomous emergency braking system capable of functioning at highway speeds, a lane support system (LSS) with lane keep assist (LKA) and emergency lane keeping (ELK) functionality, and blind spot monitoring (BSM).

Tests of the **AEB (Car-to-Car)** system showed GOOD performance with collisions avoided or mitigated in all car-to-car rear test scenarios. GOOD performance was seen in **AEB Junction** tests, as well as some **AEB Crossing** scenarios where the test vehicle can autonomously brake to avoid crashes when crossing into the path of an oncoming vehicle. The **AEB Head-On** system was shown to mitigate frontal crashes in the specified test scenarios (GOOD performance).

Tests of **LSS** functionality showed overall GOOD performance, including in most of the more critical emergency lane keeping test scenarios.

A speed assistance system (SAS) with speed limit information function (SLIF) and intelligent adaptive cruise control (iACC) is standard, informing the driver of the local speed limit and allowing the driver to accept the change in speed accordingly.

A seatbelt reminder system is fitted to all seating positions with occupancy detection available for the front passenger and rear outboard seating positions.

A direct driver monitoring system (DMS) that can detect driver drowsiness and distraction is fitted as standard. The system provides a warning to the driver and can adjust driver assistance parameters.
