Model History and Safety Features

The tested model of Hyundai Elantra was introduced in Australia during 2006. This result applies to Elantras with an upgraded rear door mechanism, introduced in July 2007, and head-protecting side curtains.

Dual front airbags and antilock brakes (ABS) with electronic brake distribution (EBD) are standard. Side airbags and head-protecting side curtains are optional on the SX and standard on the SLX and Elite in Australia. They are standard on all variants in New Zealand. Electronic stability control (ESC) is standard on the Elite and optional on other variants in Australia. ESC became standard on all New Zealand variants during 2007.

The front seat belt buckles are mounted on the seats and the upper anchorages are adjustable. These features improve the fit of the seat belt. Pretensioners are fitted to the front seat belts to reduce slack in the event of a crash. A three point seat belt is fitted to the centre rear seat. This provides better protection than a two point (lap) seat belt.

Overall Evaluation: 3

3 Stars. The Elantra scored 7.81 out of 16 in the offset crash test. The passenger compartment held its shape well. Protection from serious leg injury was poor for the driver. Chest protection was marginal.

The vehicle scored 12.95 out of 16 in the side impact crash test. There was a moderate risk of serious chest and abdomen injury for the driver.

Frontal Offset Crash Test

Body region scores out of 4 points each: Head/neck 4 pts, chest 2.21 pts, upper legs zero pts, lower legs 1.6 pts.

The passenger compartment held its shape well in the offset crash test. The accelerator pedal moved rearwards by 65 mm and downwards 12mm. The steering wheel hub moved 22 mm rearward, 5mm downward and 48 mm sideways. The front ("A") pillar moved 24 mm rearwards. All doors remained closed during the crash. After the crash the driver's door opened with high manual effort. The airbag cushioned the head of the driver and contact was stable. Steering column and dash components were a potential source of injury for the driver's knees. The passenger's head was cushioned by the airbag and contact was stable.

Side Impact Crash Test

Body region scores out of 4 points each: Head 4 pts, chest 1.35 pts, abdomen 2.64 pts, pelvis 4 pts.

The vehicle was eligible for an optional pole impact test, since it had head-protecting side airbags and scored four points for the head in the side impact test. However, the manufacturer decided not to go ahead with this test, which can earn a further two points. A separate ANCAP rating is available for the Elantra without head-protecting side curtains.
