RATING CRITERIA 2023-2025

RATING EXPIRES December 2030

AIRBAGS

Dual frontal, side chest, side head.

centre, driver knee

The Skoda Superb was introduced in New Zealand in March 2025 and Australia in June 2025. This ANCAP safety rating applies to all variants

The ANCAP safety rating for the Skoda Superb is based on testing of the closely-related Volkswagen Passat, sold in Europe. Technical information and additional test data confirm that the test results of the Volkswagen Passat also apply to the Skoda Superb.

Dual frontal, side chest-protecting and side head-protecting airbags and a driver knee airbag are standard. A centre airbag, which provides added protection to front seat occupants in side impact crashes, is also standard.

Autonomous emergency braking (Car-to-Car, Vulnerable Road User, Junction & Crossing, Backover and Head-On) as well as a lane support system with lane keep assist (LKA), lane departure warning (LDW) and emergency lane keeping (ELK), and an advanced speed assistance system (SAS) are standard.

SIDE IMPACT#
6.00 points out of 6

FAR SIDE IMPACT 4.00 points out of 4

Scaled scores. Total test scored out of 16.00 points.

The passenger compartment remained stable in the **frontal offset (MPDB)** test. Dummy readings for the driver and front passenger showed GOOD protection for all critical body regions, and full points were awarded.

The front structure of the Skoda Superb presented a moderate risk to occupants of an oncoming vehicle in the MPDB test (which evaluates vehicle-to-vehicle compatibility), and a 3.84 point penalty (out of 8.00 points) was applied.

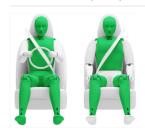

In the **full width frontal** test, protection was ADEQUATE for the chest of both the driver and rear passenger, with GOOD protection offered for all other critical body regions.

In the **side impact** and the **oblique pole** tests, protection offered to all critical body regions was GOOD and the vehicle scored maximum points in these tests.

The Skoda Superb is equipped with a centre airbag to protect against occupant-to-occupant interaction in side impacts and it provided GOOD protection for the head of both front seat occupants. Prevention of excursion (movement towards the other side of the vehicle) in the **far side impact** tests was assessed as ADEQUATE for both the vehicle-to-vehicle impact scenario and the vehicle-to-pole scenario.

A Rescue Sheet, providing information for first responders in the event of a crash is available, and a multi-collision braking system is fitted. It was demonstrated that, if the car entered water, the doors and windows of the Skoda Superb would remain functional for the minimum required time period.

ON-BOARD SAFETY FEATURES

11.41 points out of 13

In the frontal offset and side impact tests, protection of the 10 year and 6 year dummies was GOOD and maximum points were scored in these tests.

The Skoda Superb is fitted with lower ISOFix anchorages on the rear outboard seats and top tether anchorages for all rear seating positions.

Installation of typical child restraints available in Australia and New Zealand showed most child restraints could be accommodated in most rear seating positions, though one of the selected Type A convertible seats could not be correctly installed in rearward facing mode using the ISOfix anchorages, and one of the booster seats could not be correctly installed in the centre rear position.

A child presence detection (CPD) system is not available.

INSTALL WITHOUT PROBLEM
INSTALL WITH CARE CANNOT BE FITTED SAFELY X INSTALLATION NOT ALLOWED - N/A

The child restraints fitted to vehicles tested by Euro NCAP are relevant to the European market. For Australasian consumens, this information should be used as a guide to vehicle only. The Child Restraint Evaluation Program (CREP) provides an independent assessment on the safety of Australasian child restraints - see www.childcarseats.com.au. Installation of each child restraint is assessed separately in each position. Installation of multiple restraints has not been assessed and may not be possible.

HEAD PROTECTION (Adult, Child, Cyclist) 11.50 points out of 18	KNEE & TIBIA PROTECTION 7.40 points out of 9	AEB CYCLIST 8.73 points out of 9
PELVIS PROTECTION 4.50 points out of 4.5	AEB PEDESTRIAN (Forward) 6.51 points out of 7	AEB MOTORCYCLE 5.67 points out of 6
FEMUR PROTECTION 4.50 points out of 4.5	AEB PEDESTRIAN (Backover) 0.50 points out of 2	LSS MOTORCYCLE 2.50 points out of 3

In pedestrian impact tests, the bonnet and windscreen provided ADEQUATE protection to the head of a struck pedestrian over most of its surface, with WEAK and POOR results recorded on the stiff windscreen pillars and the base of the windscreen.

Protection of the pelvis and femurs was GOOD, while protection of the lower legs was mixed, with areas of GOOD and WEAK performance.

The autonomous emergency braking (AEB) system is capable of detecting and reacting to vulnerable road users such as pedestrians, cyclists and motorcyclists.

Testing of this system showed GOOD performance in AEB Pedestrian test scenarios, including in turning scenarios, with collisions avoided or mitigated in most tests. Performance in reverse (AEB Backover) was MARGINAL.

GOOD performance was seen in AEB Cyclist test scenarios, with collisions avoided or mitigated at all test speeds, including in the turning scenarios. The vehicle provides information and a warning for all doors when a bicycle is approaching from behind (cyclist anti-dooring).

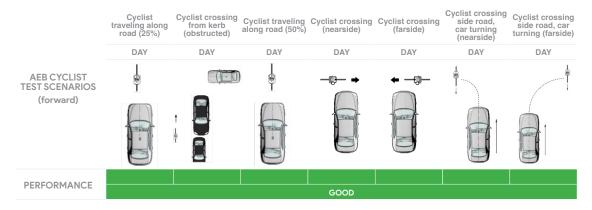

GOOD overall performance was seen in the AEB and LSS Motorcyclist tests, including in turning scenarios, however the vehicle could not avoid a collision in some of the ELK Overtaking tests.

The Skoda Superb is fitted with an autonomous emergency braking system capable of functioning at highway speeds, and a lane support system (LSS) with lane keep assist (LKA) and emergency lane keeping (ELK) functionality, and blind spot monitoring (BSM).

Tests of the **AEB (Car-to-Car)** system showed GOOD performance with collisions avoided or mitigated in all carto-car rear, **AEB Junction**, and in almost all **AEB Crossing** scenarios, where the test vehicle can autonomously brake to avoid crashes crossing into the path of an oncoming vehicle. AEB Head-On system functionality showed ADEQUATE performance.

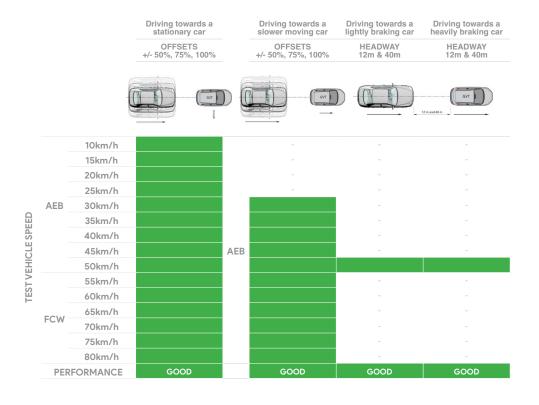

GOOD performance was shown in tests of the **lane support system** functionality, including in the more critical emergency lane keeping test scenarios.

A speed assistance system (SAS) with speed limit information function (SLIF) and intelligent adaptive cruise control (iACC) is standard, informing the driver of the local speed limit and automatically adjusting the set speed.

A seatbelt reminder system with occupancy detection is fitted to all seating positions. An indirect driver drowsiness monitor system is fitted as standard.
