### Volkswagen Caddy 03/2007 on 01/0001 - Frontal+Side

#### Overall Evaluation

**Overall Score**  
Variant: Life

**28.46 out of 37**  
Engine: 1.9 litre diesel  
Category: Van

Safety equipment, as tested, not standard on all variants  
The diesel left-hand-drive European Caddy Life with dual front and side airbags was tested by Euro NCAP. Australasian specifications may vary and therefore models sold in Australasia might provide different levels of protection to those described on this page.

#### Model History and Safety Features

The tested model of Volkswagen Caddy was introduced into Australia during 2006. A driver airbag is standard on the van. Antilock brakes (ABS) with Electronic Brakeforce Distribution (EBD) are also standard. Chest-protecting side airbags and a front passenger airbag are optional in Australia but were fitted to the vehicle tested by Euro NCAP. Electronic stability control (ESC) is also optional. An intelligent seat belt reminder is fitted to the driver seat of the Australian model. The front seat belt buckles are mounted on the seats and the upper anchorages are adjustable. These features improve the fit of the seat belt. Pretensioners are fitted to the front seat belts to reduce slack in the event of a crash.

#### Overall Evaluation: 4

4 Stars. The Caddy Van scored 12.46 out of 16 in the offset crash test. The passenger compartment held its shape well. Protection from serious chest and leg injury was marginal for the driver. The vehicle scored 15 out of 16 in the side impact crash test. Injury measurements were all good but a door unlatched, resulting in a one point deduction.

#### Frontal Offset Crash Test

Body region scores out of 4 points each: Head/neck 4 pts, chest 2.59 pts, upper legs 2 pts, lower legs 3.87 pts. The passenger compartment held its shape well in the offset crash test. The clutch pedal moved rearwards by 97 mm and upwards 3 mm. The steering wheel hub moved 16mm forward, 27mm upward and 9mm sideways. The front ("A") pillar moved 44 mm rearwards. All doors remained closed during the crash. After the crash the driver's door could be opened with high manual effort. The airbag cushioned the head of the driver and contact was stable. Dash components were a potential source of injury for the driver and passenger knees. The passenger's head was cushioned by the airbag.

#### Side Impact Crash Test

Body region scores out of 4 points each: Head 4 pts, chest 4 pts, abdomen 4 pts, pelvis 4 pts. The vehicle was not eligible for a Pole Impact Test since it did not have head-protecting side airbags. This test can earn eligible vehicles an extra two points.

#### Pedestrian rating (v4.1)

Child head impacts 4.8  
Adult head impacts 7.7  
Upper leg impacts Zero
