BYD ATTO 3

JULY 2022 - ONWARDS
ALL AUSTRALIAN VARIANTS

RATING YEAR 2022 VEHICLE TYPE Small SUV

ENGINE TYPE Battery Electric Vehicle (BEV)

BUILT FROM May 2022*
ON SALE FROM July 2022
SERIES N/A

AIRBAGS Dual frontal, side chest, side head, centre

The BYD ATTO 3 was introduced in Australia in July 2022. This ANCAP safety rating applies to Standard Range and Extended Range variants sold in Australia and built from 21 November 2022 (after VIN LGXCE4CBXN2131695).

*This rating also applies to Australian-supplied ATTO 3 vehicles built from May 2022 that have received brand-initiated updates to the centre rear seating position to expose the top-tether child restraint anchorage, and to the front passenger seating position to disable use of this seating position for the transport of young children, including removal of the airbag disabling switch.

Vehicles built prior to 21 November 2022 that have not had these updates applied are unrated.

Dual frontal, side chest-protecting and side head-protecting (curtain) airbags are standard. A centre airbag which provides added protection to front seat occupants in side impact crashes is also standard.

Autonomous emergency braking (Car-to-Car, Vulnerable Road User, Junction Assist and Backover) as well as a lane support system with lane keep assist (LKA), lane departure warning (LDW) and emergency lane keeping (ELK), and a speed sign recognition system are standard on all variants.

A separate rating is available for the New Zealand-supplied vehicles.

RATING APPLICABILITY

VARIANT	BODY TYPE	ENGINE	DRIVETRAIN	AUS	NZ
BYD ATTO 3 Standard Range	5 door SUV	Battery Electric Vehicle (BEV)	2WD	\checkmark	-
BYD ATTO 3 Extended Range	5 door SUV	Battery Electric Vehicle (BEV)	2WD	\checkmark	-

The passenger compartment of the BYD ATTO 3 remained stable in the frontal offset (MPDB) test. Protection of the driver's chest and lower legs was ADEQUATE, with GOOD protection offered to other body regions. Protection of the front passenger chest was also ADEQUATE. Protection of all other critical body regions for the front passenger was GOOD.

The front structure of the BYD ATTO 3 presented a moderate risk to occupants of an oncoming vehicle in the MPDB test (which evaluates vehicle-to-vehicle compatibility), and a 1.15 point penalty was applied.

In the full width frontal test, protection was ADEQUATE for the chest of both the driver and the rear passenger, while GOOD protection was offered for all other critical body regions.

In the side impact test, protection offered to all critical body regions was GOOD. In the oblique pole test, chest protection was WEAK, with GOOD protection of all other critical body areas.

The BYD ATTO 3 is equipped with a centre airbag to protect against occupant-to-occupant interaction in side impact crashes and it provided GOOD protection for the head of both front seat occupants. Prevention of excursion (movement towards the other side of the vehicle) in the far side impact tests was assessed as GOOD for the vehicle-to-vehicle impact scenario and ADEQUATE for the vehicle-to-pole scenario.

Head contact: No penalty

WHIPLASH (REAR IMPACT) PROTECTION

In both the frontal offset and side impact tests, protection was GOOD for all critical body areas for both the 6 year and 10 year child dummies.

BYD ATTO 3 vehicles built from 21 November 2022 are fitted with lower ISOFix anchorages for the two outboard seating positions in the second row, and top-tether anchorages for all three second-row seating positions. This child restraint anchorage configuration is also present on vehicles built from May 2022 that have received brand-initiated updates to the centre rear seating position (to expose the top-tether child restraint anchorage), and to the front passenger seating position (to disable use of this seating position for the transport of young children, including removal of the airbag disabling switch).

NOTE: Vehicles built prior to 21 November 2022 that have not had these updates applied are unrated.

With the above child restraint configuration, installation of typical child restraints available in Australia showed that all of the selected child restraints could be accommodated in all three of the rear seating positions.

^{*} Installation of each child restraint is assessed separately in each position. Installation of multiple restraints has not been assessed and may not be possible.

[^] The above list of child restraints has been selected to provide a general indication of the rated vehicle's ability to accommodate various CRS types. ANCAP does not endorse or recommend any one CRS brand or model, nor does it rate the safety of child restraints.

The bonnet of the BYD ATTO 3 provided predominantly GOOD or ADEQUATE protection to the head of a struck pedestrian, while WEAK and POOR results were recorded at the rear of the bonnet, at the base of the windscreen, along the front of the bonnet and on the stiff windscreen pillars.

The bumper provided GOOD protection to pedestrians' legs however protection of the pelvis was predominantly POOR.

The autonomous emergency braking (AEB) system is capable of detecting and reacting to pedestrians and cyclists. The AEB system offered GOOD performance in tests of its effectiveness in pedestrian test scenarios under both daylight and night-time conditions including in turning scenarios and some reverse (AEB Backover) scenarios. GOOD performance was also seen in cyclist test scenarios with collisions avoided or mitigated at all test speeds.

HEAD IMPACTS	15.02	(out of 24)

AEB - Pedestrian (backover)	1.00	(out of 2)
AEB - Cyclist	8.20	(out of 9)

AUTONOMOUS EMERGENCY BRAKING (PEDESTRIAN, CYCLIST & BACKOVER)

SYSTEM NAME: Autonomous Emergency Brake

TYPE: Autonomous emergency braking with forward collision warning

OPERATIONAL FROM: 4-85 km/h

DESCRIPTION: System functions in the daytime and night

PEDESTRIAN IMPACT TEST (40 KM/H)

The BYD ATTO 3 is fitted with an autonomous emergency braking (AEB) system capable of functioning at highway speeds, a lane support system (LSS) with lane keep assist (LKA) and emergency lane keeping (ELK) functionality, and blind spot monitoring (BSM).

Tests of the AEB (Car-to-Car) system showed GOOD performance with collisions avoided or mitigated in most scenarios, including in AEB Junction Assist scenarios where the test vehicle can autonomously brake to avoid crashes when turning across the path of an oncoming vehicle.

Tests of LSS functionality showed an overall ADEQUATE level of performance, including in the more critical emergency lane keeping test scenarios

A speed assistance system (SAS) is standard. This system identifies the local speed limit and allows the driver to set the speed accordingly.

A seatbelt reminder system with occupancy detection is fitted to all seating positions.

A driver drowsiness monitor system is not available.

MODEL VARIANTS:

ANCAP safety ratings do not automatically extend to variants that have different body styles, engine configurations, driven wheels or occupant restraint systems (e.g. fewer airbags). In these cases, ANCAP considers technical evidence submitted by manufacturers before deciding on the extension of a rating to additional variants of a model.

RATING YEAR (DATESTAMP):

The Rating Year denotes the year requirements against which a vehicle has been assessed. The Rating Year is determined by ANCAP and, for vehicles rated from 2018, the Rating Year is the year in which the vehicle was tested.

- Specifications & availability subject to change. Please check with the vehicle manufacturer for confirmation of vehicle specification.
- STANDARD OPTIONAL × NOT AVAILABLE
- NOT AVAILABLE ON BASE VARIANT BUT STANDARD OR OPTIONAL ON HIGHER VARIANTS
