

balEnce™ BioPesticide Fly Spray - Pest Control for Equine

balEnce™ BioPesticide Spray and Bait are organic, all natural, safe and effective biopesticides that specifically target flies. They will not harm humans, horses, pets, beneficial insects or the environment.

Controlling the flies around you and your horses is very important, not just because of the irritating bites, but because flies are also traveling vectors of disease. The housefly alone has been linked to the spread of more than 30 bacterial and protozoal diseases.

Stable flies resemble houseflies, but they travel greater distances, breed in decaying vegetation, and feed on the blood of warm-blooded animals.

Terrege™s balEnce™ BioPesticide Liquid Spray and balEnce™ BioPesticide Bait are approved for sale to the equine market by the US Environmental Protection Agency (EPA) and the US Department of Agriculture (USDA) National Organic Program.

SEE FULL DIRECTIONS FOR USE ON PRODUCT LABEL. Always follow the instructions on the product label.

Always read and follow label directions for all products. Information here is not a substitute for directions on the product labels.

Directions for balEnce™ BioPesticide Liquid Spray for Adult Flies and Fly Larvae balEnce™

After application, adult flies and fly larvae die in 24 to 72 hours.

The active ingredient in balEnce™, *Beauveria bassiana*, is a fungal spore that infects the adult fly and fly larvae on contact. The fungus consumes and ultimately kills the insect. Flies do not develop resistance to balEnce™ as with most chemical pesticides — so rotation of pesticides is not necessary or desirable.

balEnce™ MIXING AND USAGE GUIDELINES

balEnce™ Spray for Adult Flies One 15 oz. bottle of balEnce™ Spray treats 25,000 sq. ft.

- 1,000 square feet - 0.6 oz. of balEnce™ in one gallon of water
- 2,000 square feet - 1.2 oz. of balEnce™ in two gallons of water
- 5,000 square feet - 3.0 oz. of balEnce™ in two gallons of water
- 10,000 square feet - 6.0 oz. of balEnce™ in two gallons of water

Each 15oz. bottle makes 25 gallons or 100 quarts (32 oz.) of spray at the above mix rate.

SHAKE WELL BEFORE EACH USE

The amount of water is not critical - it is important that the bottle be shaken vigorously to suspend the spores before mixing and that all of the balEnce™ solution is sprayed.

Stable Walls and Ceilings:

Spray three times per week with a coarse spray for three to four weeks until flies are under control, then once or twice per week as required.

For Flies on Horses:

Spray or use cloth to dab above concentration on face, legs and body.

balEnce™ Spray for Fly Larvae One 15 oz. bottle balEnce™ Spray treats 25,000 sq. ft.

- 1,000 square feet - 0.6 oz. of balEnce™ in one gallon of water
- 2,000 square feet - 1.2 oz. of balEnce™ in two gallons of water
- 5,000 square feet - 3.0 oz. of balEnce™ in two gallons of water
- 10,000 square feet - 6.0 oz. of balEnce™ in two gallons of water

The amount of water is not critical - it is important that the bottle be shaken vigorously to suspend the spores before mixing and that all of the balEnce™ solution is sprayed.

Manure Piles:

Spray three times per week (every other day) and crevices and around parameter of stalls as well as damp areas on stall floors twice per week with a coarse spray during fly season.

balEnce™ Bait for Adult Flies [Read More...](#)

- balEnce™ Bait may be placed in the balEnce™ bait station or used as a-scatter bait.
- Refill bait stations and/or scatter balEnce™ bait twice per week when flies are present in large numbers.
- Throw used bait onto the floor or manure pile as there may still be active material present to control flies.
