

## Snail & Slug Bait

Place 1 tsp in Slug Saloon  
Place 3 tsp in Snailer  
Half fill tray with water, mix  
Contains: malted grain, yeast, and sugar

During long-term storage (6 months or more) of the slug and snail traps, grain moths and beetles can infest the powdered bait. Similarly, rodents are very attracted to the bait packets. This is a characteristic of food grade baits. Store product in locations where you can minimize grain moths and rodents.

Infestation by beetles does not render the bait ineffective, nor does it reduce the attractiveness of the bait to slugs and snails.
