

# TerraClean® 5.0 + TerraGrow®

## TREE REPLANTING PROGRAM

TerraClean 5.0 is a bactericide/fungicide designed for control of pathogens, including fusarium, pythium, verticillium, phytophthora and more. TerraClean 5.0 is ideal for application through drip irrigation systems.

- Zero-hour REI
- OMRI listed for organic production
- Available in 5, 30, 55 and 275-gallon containers

TerraGrow is a beneficial microbial formula designed for soil and plant applications to protect roots and strengthen trees. TerraGrow improves nutrient uptake, reduces transplant shock and increases plant stress tolerance.

- Unique 7-strain beneficial bacteria formulation
- Completely water soluble for drip systems
- Available in 10 and 25-lb. containers

# AN APPLICATION PROGRAM THAT WORKS

## Before Planting

Dip bare-root plantings in a suspension containing 0.1 oz. of TerraGrow per 10 gallons of water immediately (1-2 hours) prior to planting.

Drench planting hole and surrounding soil (3-5 ft. diameter) with 1:100 solution of TerraClean 5.0 immediately prior to planting. use approximately 150-200 gallons of mixed solution of TerraClean 5.0 per 1,000 sq. ft. of soil.

## After Planting

Apply TerraClean 5.0 at 1-2 gallons per acre through irrigation system two weeks after planting and 1-2 times a month thereafter.

Follow with TerraGrow at 1-1.5 lbs. per acre 3-4 hours after application of TerraClean 5.0. Continue "after planting" treatment program for at least the first year after planting to ensure improved tree growth and establishment.

## Notes:

To aid in soil penetration, pre-wet the field to water-holding capacity before applying TerraClean 5.0. For better infiltration and penetration of the applied solution, use a non-ionic soil surfactant that is compatible with TerraClean 5.0.
