

BotaniGard®

Tank Mix Compatibility

All products tested for compatibility and reported in this document have been evaluated for impact on *Beauveria bassiana* strain GHA spores and physical compatibility only. Tests were not carried out to evaluate impact on the partner product integrity or for plant phytotoxicity. Compatibility has been tested at normal tank mix dilutions, not in concentrated stock tank dilutions (such as for injecting at 1:100). Physical compatibility can be impacted by your water quality, tank residues, or the addition of other materials in the spray tank.

- Always maintain constant agitation in your spray tank.
- Read and follow label directions for all tank mix materials.
- Make applications of tank mix solutions as soon as possible after mixing.

All chemistries available have not been tested. As a general rule of thumb, for unlisted products, wait 4-5 days before or after a fungicide application to apply BotaniGard. Most insecticides will not harm BotaniGard. Ask your distributor for information regarding specific products.

*Compatibility with spores applies to BotaniGard® ES, BotaniGard® 22WP, Mycotrol® ESO, and Mycotrol® WPO.
