

2025 EX30

Acceleration (0-60 MPH)

3.4 secs

Max engine power

422 hp

Electric range (EPA)

253 mi

Battery capacity

69 kWh

Wheel designs.

Exclusive new wheels are designed to be light and aerodynamic for improved handling and energy efficiency. They're standard in a 19-inch size.

Scandinavian-inspired design.

The EX30 exterior captures the essence of Scandinavian design with beautiful details that are also practical. From aerodynamic design to housing vital sensors, every aspect of the exterior blends form and function. The result is an SUV that's distinctive – and distinctly electric.

Dynamic 5-seater.

The EX30 delivers the utility SUV drivers love in a scaled-down package. It hits the right notes style-wise, too, with a high ground clearance, balanced proportions and confident stance. And despite its size, it's a comfortable 5-seater suited to an active lifestyle.

Features

12.3-inch center display.

A free-standing 12.3-inch tablet serves as your combined driver and center display. It puts driver information and your favorite controls at a glance in one convenient location.

Smart shortcuts.

The center display's welcome view makes it simple to set your driving preferences. You can activate driver support features, select an ambience theme and play your favorite playlist.

Customizable views.

Get driver information how you want it with different driver views. Calm mode sweeps away everything but the essentials, like speed, battery level and your expected range. Surround mode shows you the same information, plus active driving support features like available Pilot Assist and a real-time look at the vehicles in front of you.

Snapdragon® Cockpit Platforms.

Powering the next-generation infotainment system in the EX30 is software developed by our in-house engineering experts and Snapdragon Cockpit Platforms from Qualcomm Technologies, Inc. It's state-of-the-art computing power that makes core functions fast, responsive and precise.

Google built-in.

Personalize your drive with Google built-in, a range of helpful apps available with unlimited data as part of your free digital services package.

Easy software updates.

Get software updates sent directly to your car via the cloud. These over-the-air (OTA) updates roll out periodically, improving your car over time with no service visits required. OTA updates also make it easy to upgrade and add software-based features at any time.

Digital keys.

Add a digital key to your wallet app for full access to your car using your iPhone (iPhone 11 and newer). Hold your device near the roof pillar to unlock your car and place it on the wireless phone charger to start driving.

Volvo EX30 app.

Get more from your car with the free Volvo EX30 app. Use it to remotely access your car, activate climate functions, update car software and more.

Comfort and Climate

Multi-zone climate controls.

Our dual-zone climate system allows the driver and front-seat passenger to choose their own temperature settings. The car will adjust and maintain both accordingly.

Advanced air quality controls.

An advanced filter helps keep incoming air clear of dust, pollen and harmful PM2.5 particles. An air quality sensor automatically shuts the intakes and recirculates cabin air when it detects high levels of hazardous gases outside.

Wireless phone charger.

Drop your phone on the charging pad at the front of the center console. It fits larger phones and delivers up to 15 watts – perfect for quick top-ups.

Rapid charging.

Charge your EX30 from 10 to 80 % as fast as 26.5 minutes at fast public charging stations. A ChargePoint home charger makes rapid charging at home faster, too. You can start and stop charging, schedule charging, and monitor progress on the charger and your smartphone.

Top up on time.

A 20 % charge can trigger a charging reminder to help you top up on time. With the reminder, your car offers to list nearby public charging stations on your center display. Select a station and enjoy turn-by-turn navigation plus an estimated time of arrival and expected charge level on arrival.

Collision avoidance systems.

The EX30 is designed to help you avoid or mitigate collisions with other vehicles, pedestrians and cyclists any time, day or night. It can send audio and visual alerts and brake pulse warnings when a collision risk is detected.

Driver alert system.

Your car can detect distracted and drowsy drivers. An infrared sensor on the steering column tracks the driver's eye and head movements. It tracks how fast or slow they blink and how often. A front-facing camera watches the road to detect erratic driving. And another sensor monitors the steering wheel.

Door opening alert.

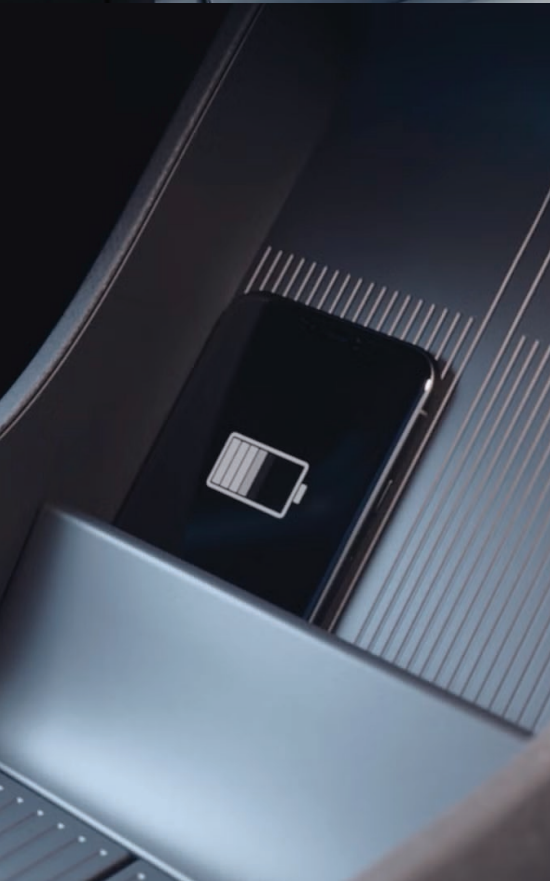

The EX30 uses rear radars to detect cyclists and scooters approaching from behind, sounding an alert if someone in the car goes to open a door. The alert has two levels. First, you'll hear a warning on the center display and a steady Blind Spot Information System (BLIS) light. When a collision risk is imminent, the alert escalates to a warning sound, and the BLIS light will flash.

Available Park Pilot Assist.

The EX30 can steer, accelerate and brake to park itself. And yes, it can even parallel park. Just keep a sharp eye on what's going on around you and take over if something unexpected happens.

Available 360° camera.

Cameras on all sides give you a high-resolution 360° bird's-eye view of your car. It even offers a 3D view for enhanced parking assistance. This view automatically pops up on the center display when you go into reverse gear or approach an obstacle at low speed.
