No compromises.

Add electric power to your everyday drive and enjoy a plug-in hybrid that considers tomorrow without compromising today's experience.

Agility to go.

With one pedal drive and all-wheel drive, the XC60 plug-in hybrid performs with agility while delivering relaxed control and a smooth, powerful drive.

Features

Best-in-class navigation.

With Google Maps seamlessly integrated in the XC60 plug-in hybrid, real-time traffic info and automatic rerouting helps you reach your destination with less hassle.

Google Assistant.

Talk to Google in your XC60 plug-in hybrid for hands-free help. Easily get directions, enjoy entertainment and keep in touch with friends, family and colleagues – just say “Hey Google” to get started.

Google Play.

Stay connected to your digital life. Google Play in your XC60 plug-in hybrid lets you enjoy the apps and services that can make every journey more entertaining and convenient.

Cleaner cabin air.

The available advanced air purifier in our air quality system prevents up to 95 percent of hazardous PM 2.5 particles entering the cabin. This can help you and your passengers enjoy better and healthier air quality, no matter the conditions outside. You can even monitor particle and pollen levels outside the car.

A helping hand.

Enjoy smooth control. Supportive driver assistance technology can help you maintain a safe distance to cars in front by adapting your speed as well as helping keep you centered in the lane through subtle steering adjustments.

Stay focused.

Head-up display allows you to watch your speed, follow turn-by-turn navigation, and more. All without losing focus on the road. The brightness of the head-up display adapts automatically to the light conditions, and you can set the system to suit your own personal preferences.

360° parking view.

With four cameras providing a 360° view and flank sensors increasing awareness of objects at the side of the car, our system can help you park confidently even in confined spaces.

Reverse with confidence.

Cross traffic alert with autobrake supports the driver when reversing with limited view. The system can detect vehicles crossing behind and if needed, the autobrake can be applied.

Ease stress in busy traffic.

Our blind spot information system (BLIS) provides active support when changing lanes. If there is a risk of collision with other vehicles in the adjacent lane, BLIS can subtly adjust steering, helping keep you, your car and your loved ones right where you mean to be.

Help crossing oncoming traffic.

Our safety assistance technology can help when making a turn across oncoming traffic by autobraking if there's risk of a collision.

Avoid collisions.

Day or night, our intelligent safety assistance technology can help you detect and avoid other vehicles, pedestrians, cyclists and large animals. It does this by first warning the driver then autobraking if the driver fails to react.

Detects and corrects drifting.

If you start drifting across the center line, there is always a chance of a collision with an oncoming vehicle. Your car can detect this and correct the steering, helping you back to a safer position on the road.
