No joints = no leaks

Who we are

ARP Ltd is a specialist manufacturer of architectural aluminium roofline products and rainwater systems. Our products are designed to meet the highest standards of performance, aesthetic appeal, and durability, catering specifically to the needs of specifiers and installers.

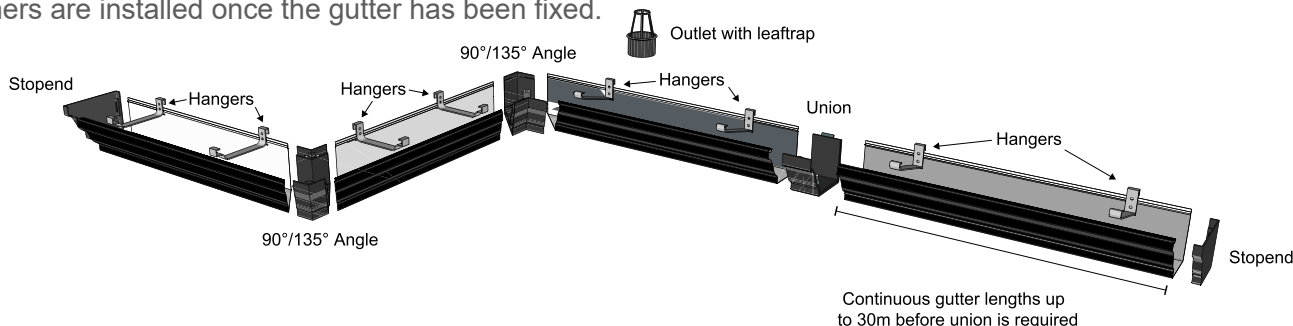

With over 35 years of industry experience, ARP has a reputation for delivering exceptional customer service and a wide array of rainwater and roofline solutions. As a market leader, we are committed to continuously enhancing and expanding our product range. Our range includes traditional cast iron rainwater profiles ideal for Heritage and Listed Buildings, an innovative aluminium snap-fit gutter system, and a recently introduced steel rainwater system. Our Trueline architectural aluminium products include wall copings, fascia and soffit systems, flashings, door canopies, window surrounds, and more, catering to various projects.

At the end of 2023, ARP was acquired by The Alumasc Group Plc - the market leader in metal rainwater solutions - providing high-quality, low-carbon, sustainable building products, systems, and solutions.

Mustang® Aluminium Seamless Guttering

Mustang® is an aluminium seamless gutter system which provides a leak-free and low maintenance solution for any pitched roof.

The gutter is produced on site from a pre-coloured aluminium coil and roll formed in continuous lengths of up to **30 metres**. Brackets and components are installed at ground level prior to raising the gutter to roof level, reducing time spent working at height. If corners are required, the product is mitred and two part interlocking corners are installed once the gutter has been fixed.

ARP has supplied seamless aluminium guttering for over thirty-five years, and our Mustang® guttering system is the only aluminium seamless gutter system approved by the British Board of Agrément (BBA).

Under the strict BBA guidelines, ARP and our approved installer network are regularly audited and assessed to ensure that the product and installers provide the highest possible standards.

Client Benefits

- Leak-free and colourfast
- Minimal maintenance
- 30 years plus life expectancy
- BBA certified
- Environmentally responsible solution - no waste
- Cost comparable to uPVC
- Approved installer network

Chosen by Local Authorities, Housing Associations and developers requiring a low-maintenance, leak-free gutter solution.

Contractor Benefits

- No call backs
- Quick and easy to install
- Less time spent working at height
- No on-site wastage
- High-quality product offering
- Continuous training and inspections
- Cost comparable to uPVC
- No waiting for material

Renfrewshire Council

Sector:	Local Authority Housing
Location:	Renfrew, Scotland
Project description:	Repair and maintenance of local authority homes.
Number of units:	4,500
Project duration:	Ongoing since 2020
Property types:	Bungalows, houses, sheltered housing.
Length of run:	30 metres
More information:	https://arp-ltd.com/renfrew

Shingler Homes

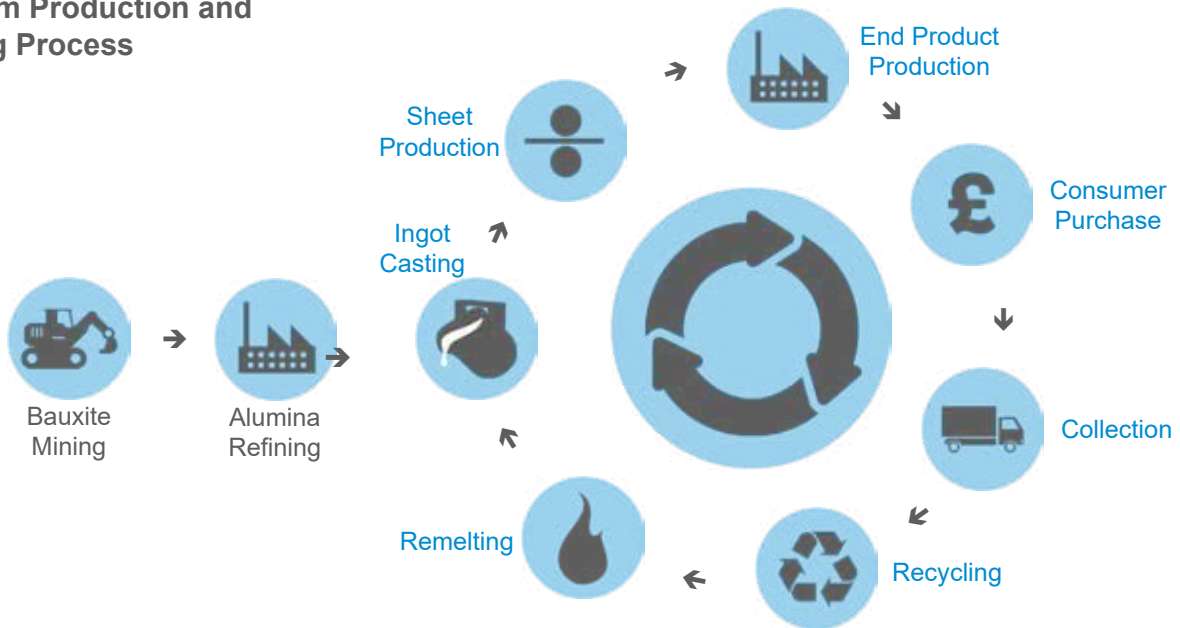

Sector:	Private Residential
Location:	Baschurch, Shropshire
Project description:	Small development of luxury homes.
Number of units:	Thirty
Project duration:	Ongoing since 2017
Property types:	2, 3 and 4-bedroom homes
Length of run:	Up to 6 metres
More information:	https://arp-ltd.com/shingler

Wakefield District Housing

Sector:	Local Authority Housing
Location:	Wakefield, Yorkshire
Project description:	Re-roofing and new build of decent homes scheme.
Number of units:	In excess of 23,000
Project duration:	20 years so far - ongoing.
Property types:	Bungalows, houses, apartments, public buildings
Length of run:	Up to 12 metres
More information:	https://arp-ltd.com/wakefield

Environment

Aluminium is one of the most readily available and sustainable materials used in construction today.

Aluminium produced today serves as a resource for the future. In Europe, the recycling rates for aluminium at the end of its life exceed 95% in both the automotive and construction industries.

The 0.9mm coil used to form Mustang® aluminium gutters contains at least 83% recycled material, with the balance consisting of re-melted aluminium ingots. Using recycled aluminium reduces the need for bauxite mining, saves one of the earth's natural resources and saves 95% of the energy requirements compared to metal made from raw materials.

On installation, the environmental benefits continue. Unlike other guttering systems, Mustang® is produced in continuous lengths to the exact dimensions of the building, meaning there is no waste. All components are wrapped in paper or woven bags and packed into cardboard boxes for despatch. Carbon emissions are limited to the initial installation.

Further maintenance will not be required once the seamless leak-free system has been commissioned.

Colonnade Downpipes

ARP's Colonnade aluminium downpipes are compatible with Mustang® gutters and are available in round, square, rectangular, and anti-vandal security profiles. Complimented by our unique swept bends, they form a complete, high-quality aluminium drainage system.

Life Cycle Costings

How does Mustang compare to other systems?

Mustang aluminium seamless guttering is a premium quality system with a circular economy. Over the last 35 years, ARP has built up a network of established installers, who are fully approved and audited under the BBA certification for product credibility.

A number of local authorities and housing associations use Mustang seamless gutters as the product of choice for both the replacement of existing systems and new housing stock. The contracts in place involve many thousands of properties. Part of the decision-making process involves the economics of using Mustang against other products/materials and its viability within set financial budgets.

- Seamless aluminium guttering originated in the US and Canada in the 1960s and now accounts for around 70% of manufactured gutters in the US, whilst in the UK, it only accounts for 1-2%.
- Installation costs are comparable to uPVC, enhancing the economic viability of Mustang seamless gutters.
- Ground-level bracket fitting and the lightweight nature of aluminium reduce installation costs and time spent working at height.
- Mustang gutters have a functional life expectancy of 30 years compared to the limited lifespan of uPVC.
- The sustainable credentials of aluminium make it an attractive choice.

Add to Specification

The Mustang® seamless aluminium guttering system is available on NBS Source.

Specifiers can find detailed product information in the standardised NBS specification format alongside a wealth of content, such as case studies and a detailed Technical Submittal.

Specify Mustang seamless aluminium gutters for your next project for a reliable, sustainable, and low-maintenance system designed to last decades.

Specifier Benefits

- Affordable and long-lasting gutter system suitable for any property
- Detailed technical information is available on NBS Source for easy specification
- Simple installation process with on-site production, reducing waste and emissions
- The jointless system will not leak and requires minimal maintenance
- Contributes to a circular economy
- Proven track record with some local authorities using Mustang seamless gutters for over twenty years
- Backed by ARP's network of approved installers, ensuring performance and reliability
- Access to continuously trained and inspected BBA-approved installers
- Colourfast design for lasting aesthetics
- Cost comparable to uPVC
