Drive Pro

20% LIGHTER AND STRONG AS EVER

To maximize fuel economy while reducing carbon emissions, manufacturers of 1/2-ton pick-ups are making pick-ups lighter and lighter. To complement this trend, Meyer has developed the industry's first commercial snow plow made of lightweight, high-strength steel. The Meyer Drive Pro is now available in two different grades of steel: traditional and lightweight, high-strength. Both offer great performance features. The lightweight, high-strength steel models (part #41189 for 1/2-ton pick-ups and part #41130 for SUVs) have also been redesigned to offer industry-leading ground clearance of up to nine inches. Known as the Standard Operating System, not only will you get better gas mileage, the plow will also be less prone to bottoming out while in carry mode.

Quick Facts:

- Type: Full-Trip
- Vehicle: Full-size SUVs, light-duty pickups, half-ton pickups
- Construction: Steel
