

# ROUTER BASE PLATE TEMPLATE INSTRUCTIONS

- Step 1:** Locate a good flat surface on your router table top to install your mounting plate. Using double-faced tape, adhere the template to the top to prevent shifting. Clamp template to the top if necessary.
- Step 2:** Cut the mounting plate resting ledge. We recommend a ledge of no less than 1/2" wide. Set the depth of cut to match the thickness of the plate you have selected. In most cases this will be a 3/8". You can accomplish this by using a 1/2" diameter pattern cutter with a top-mounted bearing. Cut in a clockwise direction.
- Step 3:** Cut out the inside waste of the ledge either by using a jig saw or your router by following the template again but this time using a larger template guide bushing to offset the cut.
- Step 4:** Remove the template and any adhesive tape residue from the top.
