How to Pack the EnviroScape® Model inside the Carrying Case

- Remove your new case from the shipping carton
- Lay the case on the floor so the EnviroScape logo faces up towards the ceiling. The part of the case with the EnviroScape logo is the “lid” or top half of your case.
- Unzip the case and open completely
- Remove the 2 inch loose foam protective sheet
- Place the small containers, vinyl bag or cardboard box, and spray bottles (EnviroScape model accessories) into the foam cut-outs at the bottom of the case.
- Place your model (base with landscape top on it) into the case, exactly as you would place it on a table ready for set-up. (The bottom of the clear plastic base should now be touching the accessories).
- Place the loose foam protective sheet over the top of the model.
- Close the lid of the case (the lid has the EnviroScape® logo) over the model & accessories already placed in the case.
- Zip the case and you are ready to go.
- When opening; remember that the lid is the side of the case with our EnviroScape® logo and the “lid” should face up as you lay the case on the floor, you will simply unzip, lift the model out and then the accessories.
